## MESSAGE

*‘Universal Health Coverage being the outcome and driver of progress, is at the centre of all efforts for developing our nation. Prioritizing investments in essential health services will bear dividends that will help in taking the country and province forward. Universal Health Coverage is the most powerful approach that will ensure health for all in an equitable and cost-effective manner’*

Historically, the land of five rivers or ‘Punjab’ has served as the bread bowl of the region for millennia. Advancements in agriculture have seen Punjab develop a world class irrigation network that has provided the basis for food security of Pakistan. As the concept of security has evolved over decades, we have learnt the hard lesson that any security concept that forgoes human security, will not have the desired dividend of attaining holistic security for all. Human security is underpinned by health. Whereas, in Punjab it is vital to understand that without the province’s utmost efforts in enhancing the health status of the people, overall health indicators of the country will lag behind.

**Dr Yasmeen Rashid**  
*Minister of Health,  
Punjab*

Health sector performance in Punjab is critical to improving the health status of the people of all of Pakistan. This is so as Punjab constitutes, more than fifty percent of the country’s population and any health intervention that does not address the health sector of Punjab will fail to have the desired impact at the national level.

The Government of Punjab is well cognizant of this and has made considerable efforts in addressing the health needs of the people of Punjab. The key lies in coordinating these efforts with breakthrough activities taking place in the health sector of Pakistan. The most fundamental health sector reform, was the development of the national generic Essential Package of Health Services (EPHS)/ Universal Health Coverage (UHC) - Benefit Package (BP) of Pakistan based on Disease Control Priorities-3 (DCP3) recommendations. It is a pleasure for me to announce that the Government of Punjab, endorsed the UHC-BP of Pakistan at the Inter-Ministerial Health & Population Council meeting of October 22, 2020 with a firm commitment to develop and implement the EPHS for Punjab as well.

It goes to the credit of the Primary and Secondary Healthcare Department - Punjab, that the evidence based EPHS/ UHC-BP for Punjab is now ready with support and assistance of Dr Faisal Sultan, Federal Minister of Health and his ministry, Dr Ala Alwan, Principal Investigator, DCP3/ London School for Hygiene & Tropical Medicine (LSHTM) and other partners. It is a long arduous process; however, the reward lies in its eventual implementation.

The finalization of the UHC-BP of Punjab is a credit to the untiring efforts of Mr Imran Sikandar, Secretary, Primary & Secondary Healthcare Department and Dr Haroon Jahangir, Director General Health Services, Punjab. The UHC Provincial Technical Team has been instrumental in ensuring that the developed package represents the needs of the people and is geared towards attaining maximum benefit from what costs will be incurred.

Going forward, the Government of Punjab pledges to provide the requisite support, be it finance, human resource, governance measures or administrative actions that are necessary in efficient and timely execution of the reform initiative.

## FOREWORD

**Mr Imran Sikandar**  
*Secretary, P&SHD, Punjab*

Punjab is more than half of the population in Pakistan. Any efforts made towards improving the health status of the people of Punjab have a bearing on health indicators of the country overall.

In line with the vision set forth by the Honourable Chief Minister Punjab – Mr Usman Buzdar and on the directions of the Minister of Health - Dr Yasmeen Rashid, the Primary and Secondary Department of Health directed to finalize the Essential Package of Health Services (EPHS)/ Universal Health Coverage (UHC) - Benefit Package of Punjab. The UHC-BP is a unique effort and utilizes global evidence of best practices, localizing those in the context of Punjab and prioritizing those health sector interventions through an integrated approach, which address the needs of the people.

The EPHS/ UHC-BP of Punjab is designed to be delivered across five healthcare delivery platforms, 1) community, 2) primary health care (PHC) level, 3) first level hospital, 4) tertiary hospital and 5) population levels. The responsibility of the Primary and Secondary Department of Health pertains to implementation of the District EPHS i.e., at community, PHC centres and first level hospitals levels, both through public and private sector. With the finalization of the package work has only commenced.

The UHC-BP will be initially rolled out in eight districts of Punjab with support of the World Bank. To ensure that the package is successfully implemented detailed planning will be required. A major strength of the EPHS/ UHC-BP is the involvement of the district health officials in the designing of this package. With local experience and knowledge, the probability of the package being successfully implemented remains high. In the next planning phase, district health officials will work towards developing a district implementation and monitoring plan to follow through with the introduction of the package in their respective districts. This bottom-up approach is intended to address the health system challenges faced by the first tier of health managers.

The UHC-BP of Punjab addresses another critical aspect of health sector reform i.e., Inter-sectoral Interventions. While it has been observed previously that almost half of the health burden is impacted by interventions in other sectors, to date there has been 1) a lack of understanding on how to address this and 2) a severe lack of coordination with other sectors that impact health. It is encouraging that the package will include a set of costed inter-sectoral interventions that have the greatest potential to have a positive effect on the health of the population. The health department commits itself to enabling enhanced coordination with other line departments and ensure that the package has the desired result on the health of the people.

With the support of the Federal Government in the shape of the National Health Support Programme, financed by World Bank, we remain confident that the budgetary support for UHC-BP will materialise and enable the Primary and Secondary Health Department in providing the essential services, to the people, envisaged in the package. We resolve that we will do our utmost to fulfil the vision of the Prime Minister and see '*Sehat mand Punjab*' to fruition.

## ACKNOWLEDGMENT

It is with great pleasure that I write these words on the completion and finalization of the Essential Package of Health Services (EPHS)/ Universal Health Coverage (UHC) – Benefit Package of Punjab. To say that tremendous effort has gone into the development of the package would not do justice to the immense work that has been undertaken by the Punjab UHC Technical Committee.

The team has been fortunate to have been guided by the Honourable Health Minister, Dr Yasmeen Rashid's. Her strategic decision of endorsing the generic Essential Package of Health Services (EPHS) at the Inter-Ministerial Health Council meeting held in Islamabad on October 22, 2020 and committing to develop Punjab specific EPHS document based on localized evidence is the stepping stone for health sector reforms at district and primary healthcare level.

*Dr Haroon Jahangir Khan  
Director General Health Services  
Punjab*

Global experience shows that more than ninety percent of health visits are best catered to at the community, primary and secondary levels. The advantage of doing this is twofold; first, it enables easy and timely access to health providers for patients and second, it reduces the workload on specialists who are then free to tackle more serious and complex health problems. Besides introducing efficiency in the health system, it is as tried and tested way to enhance quality of care as well. It is fortunate that with the development of the Punjab EPHS, the province now has a roadmap to embark on health service delivery at the community, PHC centre and first level hospital levels.

The Punjab UHC Technical Committee is indebted to Mr. Imran Sikandar - Secretary Primary & Secondary Healthcare Department, Punjab for the continuous support that enabled smooth functioning of the Punjab UHC technical committee, as all members were available and effectively participated the various sessions, meetings and workshops, which were critical for the EPHS prioritizing exercise. I am also thankful to Mr Ajmal Bhatti, Secretary Health, South Punjab region, who personally joined the consultative process.

Excellent support extended by Dr Rana Mohammad Safdar - Director General (Health), Ministry of National Health Services, Regulations and Coordination, Islamabad was instrumental in finalizing the Punjab EPHS. The technical team at the Health Planning, System Strengthening & Information Analysis Unit (HPSIU) under the leadership of Dr Malik Muhammad Safi – National UHC Advisor, and the technical lead - Dr Raza Zaidi deserves full praise for their tireless efforts in facilitating the development of the package for Punjab.

Development partner support has also been instrumental in completion of this prioritization exercise. WHO Representative for Pakistan Dr Palitha Mahipala and UNICEF country representative Ms. Aida Girma have provided excellent support to complete the task. It must be acknowledged that this important undertaking in Pakistan started with advocacy by Dr Ala Alwan at the DCP3 Secretariat – London for which we are grateful.

The absolute sincerity and commitment demonstrated by Dr Khalil Ahmad, Director General Health Services, South Punjab Region and Dr Zulfiqar Ali, Punjab UHC Focal Point/ Director IRMNCH and their staff is commendable. The journey ahead is tough, however, with the localized EPHS/ UHC-BP for Punjab we have the best possible chance of making a real difference to the lives of our fellow citizens and our future generations.

## Contributions

The Primary & Secondary Healthcare Department, Punjab played a lead role in the development of costed EPHS/ UHC Benefit Package of Punjab in collaboration with partners and stakeholders.

Involvement of stakeholders from the public & private health sector, civil society organizations, academic institutions, UN and donor agencies was ensured for a comprehensive and inclusive dialogue.

### Under guidance of

**Dr Yasmeen Rashid**, Health Minister, Punjab;

**Mr. Imran Sikandar**, Secretary, Primary & Secondary Healthcare Department, Punjab;

**Mr. Mohammad Ajmal Bhatti**, Secretary, Health & PW Department, South Punjab Region

### Chair & Co-Chair of Punjab UHC Technical Committee

**Dr Haroon Jahangir Khan**, Director General Health Services, Punjab

**Dr Khalil Ahmad**, Director General Health Services, South Punjab Region

#### Punjab UHC Core Team:

- Dr Zulfiqar Ali, PD IRMNCH&NP / UHC Focal Point
- Dr Shahid Latif, AS (Tech), Health & PWD, South Punjab
- Dr Mukhtar Awan, DHS, DGHS Punjab

  - Dr Saira Kanwal, Research Associate
  - Ms Javeria Yousuf, Research Associate
  - Dr Muhammad Salman, Research Associate

# *‘LEAVING NO ONE BEHIND’*

## EXECUTIVE SUMMARY

Universal Health Coverage (UHC) is based on the principle that all individuals and communities have equitable access to their needed health care, in good quality, without suffering financial hardship. A set of policy choices about benefits and their rationing are among the critical decisions for moving towards UHC. The three dimensions of UHC are: i) which services are covered and which needs to be included; ii) covered population and extension to non-covered; iii) reducing cost sharing and fees.

Designing a comprehensive package of health services considering burden of disease, cost effectiveness of interventions and social context is critical to define which services are to be covered through different platforms both through public and private sectors: i) community level; ii) primary healthcare centre level; iii) first level hospital; and iv) tertiary hospital; and v) population level. In addition, interventions related to inter-sectoral prevention and fiscal policies play a key role in moving towards UHC.

Disease Control Priorities – Edition 3 (DCP3) finalized in 2017 defines a model concept of essential universal health coverage (EUHC) that provides a starting point for country/province-specific analysis of priorities considering cost structures, epidemiological needs, and strategic priorities.

Development of a generic Essential Package of Health Services/ UHC Benefit Package of Pakistan was carried out jointly by the Ministry of National Health Services, Regulations & Coordination (NHSR&C) and Provincial/ Area Health Departments and other key stakeholders. Following the same exercise, the Specialized Healthcare & Medical Education Department; and the Primary & Secondary Healthcare Department, Punjab decided to localize scientific evidence in the context of province and use this to develop a costed Essential Package of Health Services.

The Punjab UHC Technical Committee and the Primary & Secondary Healthcare Department, Punjab led the process of localization with a quick review of availability of essential health services in the province compared to 218 DCP3 recommended interventions and 151 prioritized interventions in the generic national EPHS. The review indicated that:

- Overall, **51% (111/218) of the DCP3 recommended EUHC interventions and 80% (121/151) of the generic EPHS interventions** are currently available partially in Punjab, out of which only 21% of EUHC and 34% of generic EPHS interventions are expected to be accessible in more than 50% of the health facilities of Punjab;
- **Out of the DCP3 recommended district level EUHC interventions, 48% (89/185) and out of the generic district level EPHS interventions 81% (95/117) are available partially in Punjab.** Only 21% of district EUHC interventions and 35% of generic district EPHS interventions are available in more than 50% of facilities of Punjab;
- **Infectious diseases and non-communicable diseases clusters appears comparatively to be weak areas;**
- **Interventions at Community and PHC centre level platforms are also not up to the mark;**

After the review, scientific evidence was localized in the context of Punjab:

- It was decided to use the ‘**Description of Interventions**’ at national level as such as the same was developed through consensus among stakeholders, using the latest guidelines and manuals.

- The **burden of disease data for Punjab** for the year 2019 from the Institute of Health Matrix & Evaluation was shared and used, rather than 2017 data used at the national level.
- The Punjab UHC Technical Committee as a group decided the baseline and year wise milestones for each proposed intervention. **Year-wise targeted population for each intervention** was defined using projected Punjab data from the 2017 census, latest national/provincial/area surveys, burden of disease data for Punjab produced by the Institute of Health Metrics and Evaluation (IHME), administrative data and other published research. The baseline for some interventions was identified through department's programmatic data. Year-wise milestones were kept realistic as the same has significant impact on the overall unit cost.
- The **unit costs** for around 170 interventions across the five platforms estimated for the national exercise were used with adjustments to staff pay scales for Punjab province.
- For the Punjab EPHS, the **Incremental cost-effectiveness ratio (ICER)** values identified in the generic national EPHS were used (considering availability of limited data in province).

**Health Interventions Prioritization Tool (Hiptool)** is a web-based digital tool developed by the University College of London (UCL) and was used to analyse, optimise health interventions and visualization of results (in addition to Excel sheets). Optimization of interventions based on – cost effectiveness, disability adjusted life years (DALYs) averted, targeted population, budgetary impact was done. This consequently led to the Investment Cascade of Interventions in Punjab to further analyse the evidence.

All evidence was reviewed and discussed in group work and then in a plenary. Later on, evidence was used for prioritisation of health interventions for Punjab EPHS. A total of 146 interventions were reviewed by stakeholders and 103+10 interventions for District EPHS were prioritized.

Platform	Immediate Priority Interventions	Unit Cost (\$)/ person/ year (inclusive of health system cost)	DALYs Avert
1. Community level	23	2.27	1,367,648
2. PHC centre level	39	3.06	4,090,875
3. First level hospital	41	7.20	2,488,247
<b>District EPHS</b>	<b>103</b>	<b>12.53</b>	<b>7,946,772</b>
4. Tertiary hospital	22	10.80	1,156,977
5. Population level	12	1.47	++
<b>All five platforms</b>	<b>137</b>	<b>24.80</b>	<b>9,103,748 ++</b>

- **District EPHS included 103 interventions as immediate priority** for EPHS, out of which 23 were at Community level, 39 at PHC centre level and 41 at First level hospital;
- An addition of **10 interventions through special initiatives** will cost US\$6.13/ person/ year and will avert additional 447,899 DALYs through District EPHS.

Year wise unit costs and DALYs averted were also estimated, whereas year-wise unit costs were also estimated using 8% annual inflation rate. All costs also included health system costs at district level.

Detailed health system needs and standards are included in this document considering prioritized interventions. It was also agreed to strengthen institutional capacity in Punjab to regularly localize and generate evidence for inclusion and exclusion of interventions in future.

## ESSENTIAL PACKAGE OF HEALTH SERVICES PUNJAB

\*\*\*\*\*

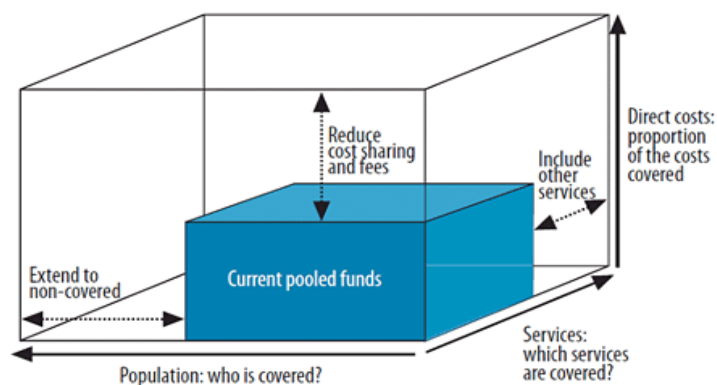

The Agenda for Sustainable Development 2015 was endorsed by the United Nations as an integrated global commitment to chart a new era for development and poverty reduction during the period 2015-2030. In this agenda, Universal Health Coverage (UHC) became the key outcome under the health goal of the Sustainable Development Goals (SDG).

The draft 12<sup>th</sup> Five Year Plan (health chapter), National Health Vision (2016) and Punjab Health Sector Strategy (2019-28) are underpinned by the idea to ensure provision of good quality essential health care services to all people through a resilient and equitable health care system.

Punjab Healthcare Department **aims:**

*'To improve the health and quality of life of all, particularly women and children, through accessing essential health service'*

UHC is based on the principle that all individuals and communities have equitable access to their needed health care, in good quality, without suffering financial hardship. A set of policy choices about benefits and their rationing are among the critical decisions in the reform of health financing system towards universal coverage. Choices need to be made about proceeding along each of the three dimensions in a way that best fits their objectives as well as the financial, organizational and political contexts. The three dimensions are: i) which services are covered and which needs to be included; ii) covered population and extension to non-covered; iii) reducing cost sharing and fees.

Three dimensions to consider when moving towards universal coverage

Disease Control Priorities – Edition 3 (DCP3)<sup>1</sup> defines a model concept of essential universal health coverage (EUHC) that provides a starting point for analysis of priorities. Pakistan is one of the first countries in the world to use the global review of evidence by the DCP3 to inform the definition of its EPHS/ UHC benefit package.

To transform the Punjab Health Vision into reality, one of the key actions is to develop province specific UHC Benefit Package. 'UHC Benefit Package' consists of i) **Essential Package of Health Services (EPHS)** at five platforms and ii) **Inter-sectoral Interventions/ policies**.

<sup>1</sup> <http://dcp-3.org/>

The Punjab Government in partnership with the DCP3 secretariat and funding of Bill & Malinda Gates Foundation (BMGF), World Health Organization (WHO), United Nations Children Fund (UNICEF), Foreign Commonwealth Development Office (FCDO) and the Ministry of National Health Services, Regulations & Coordination (NHSR&C), has ensured review and localisation of evidence to inform the prioritization of health interventions at five platforms for inclusion in the Punjab EPHS. Evidence was collected on the burden of disease in Punjab, unit cost and cost-effectiveness of each intervention, budget impact, feasibility, financial risk protection, equity and social context. In addition to economic evaluation, EPHS interventions incorporate evidence on intervention quality and uptake, along with non-health outcomes such as equity and financial protection.

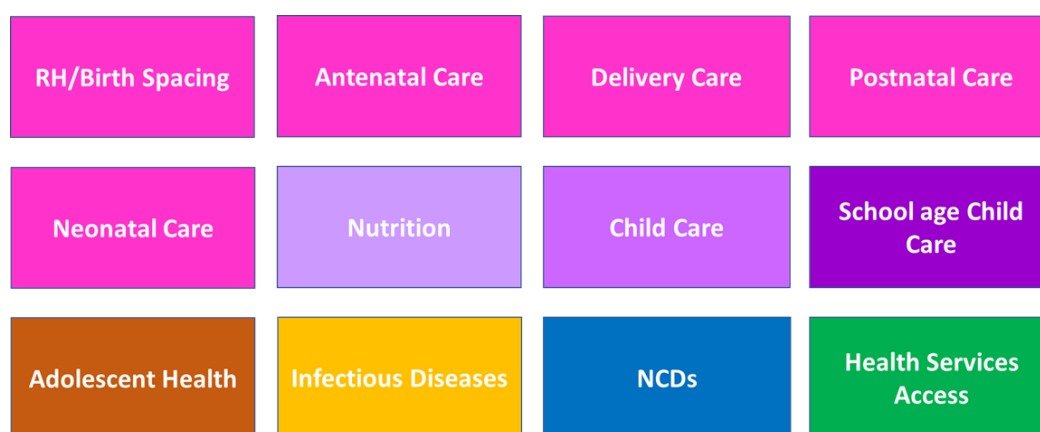

The objective of the Punjab EPHS is to define, which services are to be covered through **five different platforms** (both through public and private sector) for ALL people in Punjab:

- i) Community level;
- ii) Primary healthcare centre;
- iii) First level hospital;
- iv) Tertiary hospital; and
- v) Population level

Interventions at community, PHC centre and First level hospital are clubbed as the **District EPHS**, whereas interventions at tertiary hospital, population level and selected programmatic reforms are to be managed at provincial level. In addition, inter-sectoral policies can also play an important role in moving towards UHC and addressing around half of the burden of disease (BOD) in Punjab by mitigating risk factors.

This localized evidence was used to organise priority services into **four clusters** and **twelve categories**:

- a. Reproductive, maternal, new-born, child, adolescent health & nutrition/ Life course related cluster
- b. Infectious diseases cluster
- c. Non-communicable diseases & Injury prevention cluster
- d. Health services cluster

The evidence has been intensely reviewed by the technical experts and stakeholders, followed by critical review at the UHC Technical Committee of Punjab to select those health interventions that should be provided in the pathway to UHC, given the best estimates of the funding available to the government, partners and private sector.

## HISTORY OF ESSENTIAL HEALTH SERVICES

Near the end of 19<sup>th</sup> century, the industrial revolution in Europe saw heavy disease and death tolls especially in urban areas. Early epidemiological discoveries about diseases like cholera, malaria, yellow fever etc., raised awareness about organization of medical services, clean water, sanitation, and living conditions. During the first half of the nineteenth century, different approaches were adopted by the European countries to tackle health challenges.

Later on, the Second World War damaged health infrastructures in many countries, paradoxically it also paved the way for the introduction of some reforms. Wartime Britain's national emergency service to deal with casualties was helpful in the construction of what became, in 1948, the National Health Service, perhaps the most widely influential model of a health system.

Japan and the Soviet Union also extended their limited national systems to cover most or all of the population, as did Norway and Sweden, Hungary and other communist states in Europe, and Chile. As former colonies (including Indo-Pak) gained independence, they also tried to adopt modern, comprehensive systems with heavy state participation.

At the time of independence in 1947, Pakistan inherited a wide range of public health problems. The majority of the country's population was illiterate, unaware of healthy lifestyles and practices, malnourished or under-nourished and living in low levels of environmental sanitation with majority having no access to safe drinking water. Situation was further aggravated by the fact that only a handful of doctors and skilled personnel were left behind to manage the situation.

In 1947, a large epidemiological outbreak of cholera in Egypt gave motivation to the development of tropical medicine for dealing with international outbreak containment. A programme of social uplift was also launched, and medical colleges were established in former East and West Pakistan. Later on, scope of health services remained under the influence of international declarations, global health initiatives and other development initiatives but largely focused on the disease specific approach to health. Pakistan's public health remained focused on small pox eradication, malaria eradication/ control and control of some other infectious diseases, as well.

A paradigm shift was witnessed in the health systems after the International Conference on Primary Health Care, Alma-Ata in 1978. Health for all (HFA) became the goal and achieving universal accessibility for populace through primary health care approach became the central theme. A large number of PHC facilities were established. In 1982, an alternate Selective PHC approach (GOBI – Growth monitoring, Oral rehydration salt, Breast feeding and Immunization) was launched, which mainly targeted childhood illnesses. The launch of the Lady Health Workers' Programme in 1994 was a major reform in the country, which also expressed the commitment of the government towards International Conference of Population and Development (ICPD).

During 1980s and 1990s the World Bank and other financial institutions assumed a more preeminent role in the health sector and for specific services private sector was also engaged. During 1990s, Global Health Initiatives (Global Polio Eradication Initiatives-GPEI; Global Fund to fight against AIDS, TB & Malaria – GFATM; Global Alliance for Vaccine and Immunization-GAVI etc.) started evolving and represented a radical shift towards these Initiatives.

In 2000, the Millennium Development Goals (MDGs) reinforced the vertical disease focused nature of development assistance with additional inclusion of hepatitis, blindness etc. along with some elements of health system strengthening indirectly through programmes focusing on maternal and

child health supported by bilateral donors and multilateral banks. A number of management and institutional reforms were also tested to improve efficiency and effectiveness in the health system.

Over the period, focus of provincial governments remained on hospitals, while private sector emerged as a major service provider. However, private sector prioritized provision of private goods in health and provision of public goods remained largely the mandate of public sector.

The public sector always faced fiscal constraints due to which it could not provide essential health services to all. After 2005 Earthquake, an attempt was made to define very broad basic package of health services. At the same time at global level, concept of EPHS developed further mainly in conflict affected countries – notably Afghanistan, Somalia, Liberia, South Sudan and the Democratic Republic of the Congo to name but a few. The key feature was that all the EPHS proposals were drawn up immediately after conflict/ humanitarian crises in order to assist with comprehensive reform and reconstruction of public health infra-structure.

In Pakistan, a more formal attempt for developing an essential package of health services (EPHS) was made initially in the provinces of Punjab and Khyber Pakhtunkhwa during 2012-13, and later on in Sindh, corresponding with the 18th constitutional amendment. With UK's Department for International Development / Technical Resource Facility (TRF) support, costed EPHS were defined but remained limited to reproductive, maternal, new-born, child health and nutrition services at primary health care level. Non-communicable diseases, health emergencies, inter-sectoral interventions were not prioritized, while the implementation focus remained largely through the public sector, along with contracting out of health facilities to NGOs to a variable extent. Main objective was to ensure efficiency and effectiveness of health services in the system rather than provision of comprehensive EPHS to all people. However, this offered a good lesson learning opportunity for provision of a package of services, which was positively supported by development of minimum services delivery standards mainly at primary level. In parallel, legislative reforms were also initiated to establish healthcare commissions/ authority, to set service delivery standards and their enforcement both in the public and private sector.

Health Insurance Programme was first approved in June 2014 and launched on December 31<sup>st</sup> 2015. The Programme aimed at families living below the poverty line and were covered for up to Rs. 50,000 of treatment in public or private hospitals and for up to Rs. 300,000 for treatment of seven particularly expensive diseases: diabetes, cardiovascular diseases, cancer, kidney and liver diseases, HIV and Hepatitis complications, burns and road accidents. In 2019, the package of services was enhanced to nine diseases and per family support was increased to Rs. 720,000 per year.

The 2030 agenda on Sustainable Development in 2015 has provided another opportunity to revisit the health services and health system in Pakistan to ensure achievements of new targets and goals, which are more comprehensive and ambitious than MDGs. The Astana Declaration in 2018 is also expected to provide a fresh look on the PHC agenda.

In August 2018, an international meeting on Disease Control Priorities - Edition 3 (DCP3) was held in Pakistan and attended by Morocco, Lebanon, Iran, Jordan, Pakistan, WHO EMRO, University of Washington and other stakeholders including provincial departments of health. Soon after the workshop, and on the decision of Inter-Ministerial Health & Population Forum meeting held in September 2018, Pakistan proposed the DCP3 secretariat to select Pakistan as the first country in the World to adopt DCP3 recommended interventions. The proposal was agreed by the secretariat.

In July 2019, with support of the DCP3 secretariat and WHO, work related to development of generic UHC Benefit Package of Pakistan started through a consultative process with provincial / area Health Departments and other stakeholders. The generic EPHS was endorsed by the Inter-Ministerial Health & Population Council on 22<sup>nd</sup> October 2020. It was also decided to develop province specific EPHS. Further, development of province specific EPHS was agreed as a prior action under the WB's Development Policy Credit (DPC). Punjab has thus developed its EPHS based on localized evidence.

## UHC SITUATION IN PUNJAB

Punjab is committed to the sustainable agenda of 2030 and in health sector 'Universal Health Coverage' is the key outcome to ensure progress on health-related goal of 'Good Health'. Ensuring health services access without facing financial hardship is key to improving the well-being of the population. Universal health coverage is an investment in human capital and a foundational driver of inclusive and sustainable economic growth and development.

Punjab is Pakistan's most populous province. Forming the bulk of the transnational Punjab region of Pakistan and India, it is bordered by Sindh, Balochistan, and Khyber Pakhtunkhwa, the enclave of Islamabad, and Pakistan administered Azad Jammu & Kashmir (AJ&K). Collectively, the people of Punjab are healthier now than at any other point in history. However, despite this progress in the recent decades, there are some important variations in the health of individuals and populations. Whilst the overall health has been improving, the health of the least and less well-off has been getting worse. Access to healthcare is a major challenge in achieving health outcomes for the populations especially in hard-to-reach areas. Limited access to essential health services is mainly affecting the population residing in rural areas, due to persistent urban-rural bias and in physical accessibility to health services. There is a glaring weakness of the urban primary health care in the public sector that is a necessity as life styles urbanize and life expectancy increases. There are changing patterns and burden of nutritional, communicable and non-communicable diseases, which can be managed at the primary and preventive level.

The trend analysis of Punjab UHC service coverage index indicates a positive trajectory i.e., 40.6% in 2015 to 51.8% in 2020. However, this is still very low considering the global target of 80+% and national target of 65% by 2030. The projected population in 2021 is 118 million with more than 16.5 million children under the age of 5 years and 24.8 million child bearing age women. The birth rate is estimated as 28 per 1,000 population with total fertility rate is 3.4 children per women in 2017-18. The life expectancy is 65.07 years (63.96 years for males and 66.31 years for females<sup>2</sup>) with projected growth rate 1.88. However, the death rate is 7.22 per 1000 population.

Considering the health demographics, the Punjab province is undergoing the epidemiological transition from communicable diseases to the emerging non-communicable conditions and injuries. Burden of the communicable, maternal, child and nutritional group, which was 65.1% (43,976 DALYs lost per 100,000 population) in 2000, has gone down to 46.80% (20,358 DALYs lost per 100,000 population) in 2019. However, the burden of non-communicable diseases (NCD) group which was 29.9% (20,209 DALYs lost per 100,000 population) of the total burden in the year 2000 has increased its share to 46.5% (20,196 DALYs lost per 100,000 population) in 2019. The share of burden of injuries increased from 4.9% (3,311 DALYs lost per 100,000 population) to 6.7% (2,914 DALYs lost per 100,000 population) over the same period.

---

<sup>2</sup> IHME; Global Burden of Disease data for Punjab, 2019

The overall sexual and reproductive health in Punjab is assessed by maternal mortality ratio and has reached the level of 157/100,000 live birth from 2016-19<sup>3</sup> and is the lowest compared to other provinces but higher than AJ&K. There are significant improvements in other maternal health indicators especially skilled birth attendant 71.3% and the institutional deliveries are 68.9% in 2017-18<sup>4</sup>. However, there are serious equity concerns as quality services are not available in rural areas.

Unfortunately, there has been decrease in contraceptive prevalence rate with only 27.2% of couple using the modern contraceptive methods. The weak family planning services leads to unintended pregnancies, leading to rising induced abortions and unplanned childbirth.

Maternal health has a direct impact on the new-born health. The neonatal mortality in Punjab is 51/1000 live births. Under-five mortality is 85/1,000 live births and the infant mortality is 73/1,000 live births in 2017-18, both are considered to be highest, compared to other provinces/area. As per Immunization coverage survey 2020, the DPT/ Penta III coverage was 94.9%, whereas fully vaccinated coverage was 89.9% in 2020. Pakistan Demographic and Health Survey 2017-18 in Punjab demonstrates children under 5 years as 29.8% stunted and 4% wasted. The women of reproductive age (15-49 years) with anemia are constituting 49.3%, whereas the prevalence of anemia among under five children is 60.3%.

In 2019, the incidence of Tuberculosis is 263/100,000 population whereas incidence of the Multi Drug Resistance cases is 13/ 100,000 population (IHME). The total notified cases are 189,712 in 2019 with case detection rate of only 62% and treatment success rate 92%. The incidence rate of HIV & AIDS in Punjab is 5.33, whereas prevalence is 34.63 per 100,000 population. For Hepatitis B and C, blood transfusion, therapeutic injections, syringe use and hospitalization are the main risk factors.

According to the Punjab burden of disease data for 2019, the prevalence of Hepatitis B is 89.37 per 100,000 people, while the prevalence of Hepatitis C is 10.66 per 100,000 people. The annual parasitic incidence for malaria in Punjab is very low (0.08) with total number of new cases of malaria according to burden of disease in 2019 were 32,929.

The non-communicable diseases accounts for 58.5% of total deaths as reported by Global Burden of disease data for Punjab in 2019. Among NCDs, the cardiovascular disease accounts for 24.03% of total deaths and the number of cases with stroke and ischemic heart disease are 0.863 million and 2.34 million respectively. The second largest non-communicable group is cancers and neoplasms and is responsible for 13.03% of total deaths. The number of people living with mental health disorders are 13.5 million. Whereas diabetes and the chronic liver disorders are 4.9 million and 19.28 million respectively.

Health workforce is deficient in many areas in Punjab. Staff shortages are evident at all levels of healthcare delivery but are most prevalent outside large cities, especially in rural and hard-to-reach areas leading to impaired provision of essential life-saving interventions and effective response to various health challenges. The essential health workforce (physicians, specialists, nurses, lady health visitors (LHVs) and midwives) density is 1.45 per 1,000 population, which is much below the indicative minimum threshold of 4.45 physicians, nurses and midwives per 1,000 population necessary to achieve universal health coverage. For sustainable development, these are not adequate numbers. Several factors contribute to this shortage including migration of health workers to industrialized countries as well as exit from health sector to other professions.

<sup>4</sup> NIPS; Pakistan Demographic & Health Survey (2017-18)

## RATIONALE

The Government of Punjab is committed to improve the health of all people, particularly women and children by providing universal access to affordable, quality, essential health services which are delivered in an efficient way through a resilient and responsive health system. On the other hand, there are financial constraints and the government is unable to provide essential health services to all people.

The trend analysis of Punjab UHC service coverage index indicates a positive trajectory - i.e., from 40.6% in 2015 to 51.8% in 2020. While considering different factors, one cannot ignore whether right essential health services are offered to all people or not.

It was therefore, critical to review the current status of health services and suggest cost-effective interventions through different platforms in such a way to avert maximum possible preventable burden of disease in the province.

## AIM AND PRINCIPLES

The UHC Essential Package of Health Services is a policy framework for service provision based on scientific evidence on health interventions. The **purpose** is to ensure that all people have access to essential health services (including prevention, promotion, treatment, rehabilitation and palliation) particularly in the context of limited resources. It **aims** to address current poor access to health and inequalities in health service provision. It also helps to establish and clarify health priorities and direct resource allocation accordingly.

The guiding **principles** adopted for the development process of the 'UHC benefit package' included the following:

- Setting of the package is country/province executed and owned with active engagement of policy makers and other stakeholders
- The package should enhance equity and improve access for vulnerable segments of the population
- Strong commitment and joint work of key stakeholders in government and stakeholders is essential for success
- The process should be open and transparent in all steps with clearly defined criteria, driven by evidence and a systematic approach of collaboration from data to dialogue and decisions
- Partnership with other stakeholders including UN agencies and development partners is a critical component of joint work
- Feasibility and affordability of implementation is key. Unrealistically aspirational package with inadequate financial resources or health system capacity is a recipe for failure
- The package developed should be linked to robust financing mechanisms and effective service delivery system

## PROCESS FOR THE DEVELOPMENT OF PUNJAB EPHS

After the development of generic UHC Benefit Package for Pakistan, provincial adaptation of the UHC BP is a critical step for rolling out across the provinces. There are some variations across the provinces in terms of health systems dynamics, situation with regards to the prioritized interventions at the national level and the service delivery issues. Consequently, it is important that each province/ federating area, deliberate and prioritize interventions keeping in view the local context.

To implement the decision of developing province/area specific costed EPHS document, three options were considered by the Punjab health authorities:

- a. Adopt the generic UHC BP for Pakistan / EPHS as Punjab EPHS
- b. Consideration of the currently available Punjab specific evidence and use this for prioritization of interventions for Punjab EPHS
- c. Province specific detailed evidence generation followed by intervention prioritization

The health authorities in Punjab decided to opt for the option (b) of using Punjab specific available evidence to a maximum possible extent and use national evidence where evidence generation is time consuming and difficult. It was also decided to institutionalize the process in the Department so that evidence is generated on a regular basis and that the department will make required changes in the EPHS in future if required. Later on, following steps were followed for the development of Punjab EPHS:

### **Step 1: Governance arrangement**

To ensure clear and consistent governance of the UHC BP provincial localisation, it was important to set out the order of procedures for decision making across different tiers, roles and responsibilities while ensuring clear ways of engaging to support an inclusive process.

The governance arrangement recognizes the leadership of the health authorities in Punjab, while supported by the M/o NHR&C, Partners and the UHC BP National Advisory Committee (NAC). Primary & Secondary Healthcare Department, Punjab notified the Punjab UHC Technical Committee<sup>5</sup> under the chairmanship of Director General Health Services (DGHS), Punjab and with wider representation of different constituencies with following Terms of Reference (TOR):

- The UHC Technical Committee will act as Punjab specific Coordination and Facilitation architecture on UHC related interventions, projects and reform initiatives;
- Liaise with the Ministry of NHR&C, other departments, partner organizations and stakeholders for effective coordination and harmonization;
- Facilitate generating the localized evidence for province specific UHC Benefit Package and related reform initiatives;
- Collection, collation of available data and information on UHC related interventions and situation in the province;
- Based on available localized evidence, the group will produce background documents/ discussions papers, which will be used to guide the development of provincial UHC Benefit Package (including a: Essential Package of Health Services for all five platforms – community, PHC centre, First level hospital, Tertiary hospital and Population level; and b: Inter-sectoral interventions policies);
- Facilitate consultations at different levels to produce the project documents not limited to the National Health Support Programme (NHSP), Global Financing Facility and Joint UHC Technical Assistance (TA) Plan of the province;
- Monitor the progress of implementation of UHC related interventions and suggest recommendations for the consideration of health authorities;
- The Punjab UHC Technical Committee may form sub-committees as per need.

---

<sup>5</sup> No. 573/PA/DGHS dated 10 June 2021; and TOR of UHC Technical Committee Punjab

The Punjab UHC Steering Committee under the chair of Punjab Health Minister has been notified with following TOR:

- Provide strategic direction to oversee and governing all Punjab UHC-Benefit activities;
- Drive the use of UHC-Benefit Package in policy and planning;
- Ensure stakeholders involvement in the Punjab UHC-Benefit Package process;
- Review and approve the recommendations of the Punjab UHC Technical Committee;
- Guide and approve work plans presented by the Punjab UHC Technical Committee;
- Resource mobilisation of funds for UHC Benefit Package activities for long term sustainability;
- Monitor implementation progress in pilot districts and facilitate addressing barriers and challenges;
- Revisit the UHC Benefit Package considering evidence generated locally.

### **Step 2: Provincial Sensitization, Review and Localisation of Evidence**

After initial meetings with the Ministry of NHR&C and DCP3 secretariat, first formal consultative workshop of the UHC Technical Committee was held on 1-2 of July 2021 to sensitize the stakeholders from Punjab on the process, appraise them of the UHC situation in the province, review the availability of essential health services and set baseline and milestones for all EPHS proposed interventions for Punjab. The meeting was chaired by the DGHS Punjab and co-chaired by the DGHS, South Punjab Region.

It was agreed that the criteria used for the development of generic national EPHS will also be used in Punjab to guide the EPHS process. The criteria for the prioritization of interventions included:

1. Burden of Disease;
2. Effectiveness of intervention;
3. Feasibility;
4. Cost-effectiveness;
5. Equity;
6. Budget impact;
7. Financial risk protection; and
8. Social and economic impact.

### **Step 3: Review of Localized evidence and development of costed Punjab EPHS**

The first workshop was followed by analytical work by the core team and HPSIU to generate Punjab specific evidence for the development of Punjab EPHS. The following evidence was collated for the prioritization of interventions:

1. **Description of Interventions:** developed during the generic EPHS to be used as such in Punjab as the same was developed at national level through consensus among stakeholders, using the latest guidelines and manuals.
2. **Burden of Disease in Punjab:** With availability of the burden of disease data for Punjab, it was decided to apply province specific 2019 BOD data, instead of 2017 BOD data used at the national level for the generic EPHS. Significant rise in the total burden of disease was observed in 2019 compared to 2017.

3. **Target population for each Intervention:** The Punjab UHC Technical Committee as a group decided the baseline and year wise milestones for each proposed intervention. Year-wise targeted population for each intervention was defined using projected Punjab data from the 2017 census, latest national/provincial/area surveys, Institute of Health Metrics and Evaluation (IHME) and other published research. The baseline for some interventions was also identified through department's programmatic data. Milestones were kept realistic rather than ambitious as the same has significant impact on the unit cost estimation.
4. **Unit cost:** For the generic EPHS at national level, unit costs were calculated for 170 interventions across the 5 platforms. Costs were calculated to be nationally representative, using a provider perspective. Staff requirements were described in terms of staff type and number of minutes of direct contact required. For some interventions, multiple drug regimens were described depending on the target population. For equipment, resources were quantified by the number of minutes used per intervention. The same cost components were used in the Punjab EPHS considering the fact that the technical specifications of the interventions will remain the same. However, staff salaries were adjusted to the pay scales in Punjab and annual milestones defined by the Punjab UHC technical committee were used to make year-wise cost projections. In addition, an inflation rate 8% was also added separately for the forthcoming years.
5. **Incremental cost-effectiveness ratio (ICER):** For the Punjab EPHS, the ICERs value identified in the generic national EPHS were used (considering availability of limited data at provincial level), which were identified through the use of the Tufts registry and DCP3 databases on cost-effectiveness. The matching of the ICERs for each intervention went through a step-wise process along with assessment of quality of data.
6. **Health Interventions Prioritization Tool (Hiptool):**<sup>6</sup> is a web-based digital tool developed by the University College of London (UCL) and was used to analyse, optimise health interventions and visualization of results. Optimization of interventions based on – cost effectiveness, disability adjusted life years (DALYs) averted, targeted population, budgetary impact was done using the Hiptool. This consequently led to the Investment Cascade of Interventions in Punjab to further analyse the evidence.

The next step after generation of localized evidence / investment cascade, was a three-days' workshop held on 7-9 July 2021. The Punjab UHC Technical Committee deliberated to prioritize interventions into **immediate, special** and **high** priority categories, considering the fiscal space and availability of resources for the implementation.

Prioritized interventions were drafted as EPHS document by the Punjab Core Committee for final endorsement of the Punjab UHC Steering Committee.

## REVIEW OF AVAILABILITY OF ESSENTIAL HEALTH SERVICES IN PUNJAB

The review was carried out by the Health Authorities, Punjab and other key stakeholders to compare the current availability of Essential Health Services in the province against the DCP3 recommended 218 interventions for Essential UHC (EUHC) and 151 initially prioritized interventions under the generic EPHS of Pakistan.

---

<sup>6</sup> Health Interventions Prioritization Tool Working Group. <http://hiptool.org/>

Results are based on general consensus among 91 participants of Punjab UHC Technical Committee and gives a glimpse of health services in the province. However, there would be significant variation in service provision not only among districts of Punjab but also expected worse coverage in hard to reach/ socio-economically poor districts especially in South Punjab region.

Results in Punjab against the DCP3 recommended 218 EUHC interventions by platform and cluster are as following:

Platform	No of EUHC interventions	Not available	Available 1-25%	Available 26-50%	Available 51-75%	Available >75%
Community	59	66%	12%	2%	14%	7%
PHC Centre	68	56%	24%	4%	14%	3%
First Level Hospital	58	33%	20%	19%	17%	10%
Tertiary Hospital	20	15%	35%	20%	25%	5%
Population	13	62%	24%	12%	2%	-

Cluster	No of EUHC interventions	Not available	Available 1-25%	Available 26-50%	Available 51-75%	Available >75%
RMNCH/Age related	59	25%	17%	17%	34%	7%
Infectious diseases	51	71%	18%	-	6%	6%
NCD and Injuries	52	60%	21%	12%	8%	-
Services access	56	45%	27%	8%	10%	10%
<b>TOTAL</b>	<b>218</b>	<b>50%</b>	<b>21%</b>	<b>9%</b>	<b>14%</b>	<b>6%</b>

Results in Punjab against the generic national EPHS initially prioritized 151 interventions by platform and cluster are as following:

Platform	No of EPHS interventions	Not available	Available 1-25%	Available 26-50%	Available 51-75%	Available >75%
Community	28	14%	39%	4%	32%	11%
PHC Centre	43	35%	33%	8%	15%	9%
First Level Hospital	46	7%	26%	26%	31%	11%
Tertiary Hospital	22	9%	36%	14%	27%	14%
Population	12	50%	35%	13%	2%	-

Cluster	No of EPHS interventions	Not available	Available 1-25%	Available 26-50%	Available 51-75%	Available >75%
RMNCH/Age related	55	4%	25%	21%	42%	9%
Infectious diseases	28	47%	33%	-	10%	10%
NCD and Injuries	29	28%	38%	21%	14%	-
Services access	39	15%	38%	11%	18%	18%
<b>TOTAL</b>	<b>151</b>	<b>23%</b>	<b>34%</b>	<b>13%</b>	<b>21%</b>	<b>9%</b>

Summary results of the review indicate that:

- Overall, **51% (111/218) of the DCP3 recommended EUHC interventions and 80% (121/151) of the generic EPHS interventions** are currently available partially in Punjab, out of which only 21% of EUHC and 34% of generic EPHS interventions are expected to be accessible in more than 50% of the health facilities of Punjab;

- **Out of the DCP3 recommended district level EUHC interventions, 48% (89/185) and out of the generic district level EPHS interventions 81% (95/117) are available partially in Punjab.** Only 21% of district EUHC interventions and 35% of generic district EPHS interventions are available in more than 50% of facilities of Punjab;
- **Out of the DCP3 recommended community level EUHC interventions, 34% (20/59) and out of the generic community level EPHS interventions 86% (24/28) are available partially in Punjab.** However, only 20% of community level EUHC interventions and 43% of generic community EPHS interventions are available in more than 50% of communities;
- **Out of the DCP3 recommended PHC centre level EUHC interventions, 44% (30/68) and out of the generic PHC centre level EPHS interventions 65% (28/43) are available partially in Punjab.** However, only 16% of PHC level EUHC interventions and 23% of generic PHC centre EPHS interventions are available in more than 50% of facilities;
- **Out of the DCP3 recommended FLH level EUHC interventions, 67% (39/58) and out of the generic FLH level EPHS interventions 93% (43/46) are available partially in Punjab.** However, only 27% of FLH level EUHC interventions and 41% of generic FLH EPHS interventions are available in more than 50% of facilities;
- **Out of the DCP3 recommended TH level EUHC interventions, 85% (17/20) and out of the generic TH level EPHS interventions 91% (20/22) are available partially in Punjab.** However, 30% of TH level EUHC interventions and 41% of generic TH EPHS interventions are available in more than 50% of TH in Punjab;
- **Out of the DCP3 recommended Population level EUHC interventions, 38% (5/13) and out of the generic population level EPHS interventions 50% (6/12) are available partially in Punjab;**
- Analysis of cluster-based results indicate that out of 218 DCP3 recommended EUHC services, partially available RMNCH and age-related cluster interventions are 44/59 (**74%**), for infectious diseases cluster 15/51 (**29.4%**), for NCD & injuries cluster 21/52 (**40%**) and for health services cluster 3156 (**55%**). **Infectious diseases and non-communicable diseases clusters appears to be neglected areas;**
- Analysis of cluster-based results indicate that out of 151 recommended generic EPHS services, partially available RMNCH and age-related cluster interventions are 51/53 (**96%**), for infectious diseases cluster 16/30 (**53%**), for NCD & injuries cluster 21/29 (**72%**) and for health services cluster 33/39 (**85%**). **Again, infectious diseases and non-communicable diseases clusters need more attention.**

The review concludes that

- Current services are not sufficient to make significant progress towards achieving UHC;
- Two platforms – community and PHC centre level should have scaled up services through an integrated approach;
- Where services are included in the package they should be provided with the appropriate technology and to a high quality;
- EPHS should be a live document and should be reviewed regularly;
- UHC benefit package should also consider inter-sectoral interventions, which are mostly cost-effective and have long lasting impact on the health outcomes.

## AN OUTLINE OF PUNJAB EPHS WITH LOCALIZED EVIDENCE

The Essential Package of Health Services (EPHS) has been designed to provide a progressively improving access of essential health care services to the population considering fiscal space and based on the commitment of the government to achieve UHC.

The fiscal space is constrained and the health part of the government budget that provides sustainable resources for public purposes is very narrow<sup>7</sup>. Although a gradual increase in health expenditure has been reported in recent years, overall health expenditure remains low in Punjab with some serious equity issues. In Pakistan, public health expenditure is around 1% of the GDP whereas around 2% of the health expenditure is out-of-pocket. The total health expenditure per capita was US\$ 48 in 2017-18, of which public spending on health was around US\$ 19,<sup>8</sup> much lower than the estimated cost of the packages and compared to other countries in the region.

Adequate public spending on essential health services is central to UHC, the current financial gap calls for exploring options to implement the recommended package in a way that is consistent with current fiscal realities but also take into account the potential to adopt approaches for progressive increase in resources and coverage of interventions.

While the government need to focus attention not only to enhance health sector allocations but also to gradually improve the coverage of essential health services especially in socio-economic poor districts. The contents of the EPHS are therefore a dynamic process that should be regularly updated and refined by the Health Department. District level interventions through community, PHC clinic and FLH are interlinked with each other and augment each other for maximum benefit.

Needless to say, prioritizing the government budget for EPHS is a very challenging task that requires full engagement of the highest level of government and relevant sectors specially the Department of Planning & Development, Department of Finance and the Federal government. Making the case for a higher level of investment in health requires:

Conducting fiscal space analysis and identifying potential sources of additional funding

- Linking revenue raising to a health financing strategy and investment plan
- Advocacy for political support and presenting evidence of efficiency and economic gains

Details of interventions prioritized for the Punjab EPHS are as following:

Platform	Number of DCP3 recommended Interventions	High Priority Interventions (with split)	Immediate Priority Interventions (with split)	Interventions through Special Initiatives
1. Community level	59	28	23	6
2. PHC centre level	68	40	39	1
3. First level hospital	58	44	41	3
<b>District EPHS</b>	<b>185</b>	<b>118</b>	<b>103</b>	<b>10</b>
4. Tertiary hospital	20	22	22	-
5. Population level	13	12	12	-
<b>All Five Platforms</b>	<b>218</b>	<b>152</b>	<b>137</b>	<b>10</b>

<sup>7</sup> WHO. [https://www.who.int/health\\_financing/topics/fiscal-space/why-it-matter/en/](https://www.who.int/health_financing/topics/fiscal-space/why-it-matter/en/)

<sup>8</sup> Pakistan Bureau of Statistics; National Health Accounts 2017-18

A summary of interventions (immediate priority) of Punjab EPHS for the **year 2021** are as follows:

Platform	Immediate Priority Interventions	Unit Cost (\$)/ person/ year (inclusive of health system cost)	DALYs Avert
6. Community level	23	2.27	1,367,648
7. PHC centre level	39	3.06	4,090,875
8. First level hospital	41	7.20	2,488,247
<b>District EPHS</b>	<b>103</b>	<b>12.53</b>	<b>7,946,772</b>
9. Tertiary hospital	22	10.80	1,156,977
10. Population level	12	1.47	++
<b>All five platforms</b>	<b>137</b>	<b>24.80</b>	<b>9,103,748 ++</b>

An addition of 10 interventions through special initiatives will cost US\$ 6.13/ person/ year and will avert additional 447,899 DALYs through District EPHS.

- Unit cost of 6 community level special interventions is US\$ 0.59 with 36,547 DALYs avert
- Unit cost of 1 PHC centre level special interventions is US\$ 0.13 with 30,451 DALYs avert
- Unit cost of 3 FLH special interventions is US\$ 5.40 with 380,900 DALYs avert

DALYs avert through population level interventions are difficult to measure but are expected to be highly cost-effective, especially in partnership with other provinces/ federating areas.

At the community level, majority of interventions are to be implemented through Lady Health Workers (LHWs), which cost US\$1.53 to US\$2.3/person/year depending upon the covered population per LHW (1,500 or 1,000 people respectively).

Implementation of EPHS progressively improves the coverage of essential health care services to the population and accordingly has cost implication and DALYs averted. Accordingly, projections from 2021 to 2027 are shown below.

Year	District EPHS – 118 interventions		District EPHS – 113 interventions (Immediate & Special)	
	Unit Cost (\$) (Inclusive of health system cost)	DALYs Averted	Unit Cost (\$) (Inclusive of health system cost)	DALYs Averted
2021	21.19	8,505,087	18.66	8,394,671
2022	23.65	8,841,964	21.07	8,729,456
2023	28.06	9,587,659	25.43	9,472,004
2024	32.82	10,237,885	30.13	10,119,084
2025	39.43	11,208,004	36.68	11,085,699
2026	44.36	11,858,950	41.55	11,733,142
2027	47.61	12,362,302	43.76	12,207,611

Year	DISTRICT EPHS – 103 interventions (Immediate Priority)		
	Unit Cost (\$) (Inclusive of health system cost)	DALYs Averted	Unit Cost (\$) 8% annual inflation rate
2021	12.53	7,946,772	13.53
2022	13.12	8,112,649	14.17
2023	14.00	8,532,578	15.12
2024	14.87	8,848,070	16.06
2025	15.86	9,313,965	17.13
2026	16.87	9,622,663	18.21
2027	17.90	9,946,896	19.33

Year	Tertiary Hospital Level – 22 interventions		
	Unit Cost (\$) (Inclusive of health system cost)	DALYs Averted	Unit Cost (\$) with 8% annual inflation rate
2021	10.80	1,156,977	11.66
2022	12.09	1,264,162	13.06
2023	13.82	1,442,501	14.93
2024	15.60	1,642,012	16.85
2025	17.36	1,834,379	18.74
2026	19.55	2,089,890	21.11
2027	21.17	2,286,036	22.87

Year	Population Level – 12 interventions	
	Unit Cost (\$)	Unit Cost (\$) with 8% annual inflation rate
2021	1.47	1.59
2022		1.71
2023		1.85
2024		2.00
2025		2.16
2026		2.33
2027		2.52

Among provinces, Punjab has the lowest unit cost for population level interventions as catchment population is the highest. This unit cost can be brought down further, if Punjab work with other province/ federating areas for joint population level interventions.

## INVESTMENT CASCADES

Optimization of interventions based on localized evidence was done using – ‘HiP Tool (Health Interventions Prioritization Tool)’. This consequently led to the **Investment Cascade of Interventions**, which suggest interventions may be prioritized for inclusion in EPHS, while considering fiscal space. Investment Cascade for 118 District level interventions for Punjab is as below:

Investment Cascade for Tertiary Hospital EPHS for Punjab is as below:

The following section provide details of interventions and evidence in the context of Punjab EPHS.

## HEALTHCARE DELIVERY SYSTEM IN PUNJAB

Punjab public healthcare delivery system functions as an integrated health complex that is administratively managed at the district level. The government provide healthcare through a three-tiered healthcare delivery system and community-based interventions. The former includes Basic Health Units (BHU), and Rural Health Centres (RHC) forming the core of the primary healthcare centres. Secondary care including first and second referral facilities providing acute, ambulatory and inpatient care is provided through Tehsil Headquarter Hospitals (THQs), and District Headquarter Hospitals (DHQs) which are supported by Tertiary Care mostly annexed with teaching hospitals. Services are augmented through a range of public health programmes through healthcare delivery system and through population level interventions.

**Figure: Public & Private Healthcare Delivery System in Punjab**

The private healthcare system constitutes of for-profit and not-for-profit (NGOs and CBOs) and constitutes a diverse group of doctors, nurses, pharmacists, traditional healers, drug vendors, as well as laboratory technicians, shopkeepers and unqualified practitioners. The private healthcare delivery system includes clinics, maternity clinics, nursing homes, small hospitals (less than 50 bedded) and large hospitals (more than 50 bedded) and tertiary care from private teaching hospitals. Diagnostic facilities and the sale of drugs from pharmacies are also a part of this system. In some cases, the distinction between public and private sectors is not very clear as many public sector practitioners also practice privately.

Whereas, primary, promotive and preventive health services are largely offered by the public sector, the focus of private sector is generally on the curative care services, with bias towards urban areas.

A brief introduction of different types of District level healthcare delivery system is provided below:

### Community based healthcare delivery system

At the household level, services are provided through community-based health providers including Lady Health Workers (LHWs), Community Midwives (CMWs) and workers for community-based organizations (e.g., for provision of HIV & AIDS preventive services). In addition, there are also outreach workers including Lady Health Supervisors, Vaccinators, Population Welfare Councillor, CDC/Sanitary patrol, etc, and have been accounted for as PHC centre staff.

## **Lady Health Workers (LHWs)**

Lady Health Worker (LHW) is a community-based worker and the LHWs Programme was launched nationwide in 1994. LHW is responsible to register households in her community of around 150-200 households (an average of 1500 people) and offer primary, preventive, promotive and some curative care services. LHW is required to visit at least 7-12 households each day to ensure that all registered households are visited at least once every month. During household visit she provides services including health education, counselling, motivation and community organization. She promotes and offer family planning services, maternal and adolescent healthcare, child healthcare including immunization and nutrition services, treatment of common ailments etc.

The LHW's house is designated as a **Health House**, where she is expected to establish a 'kit corner' to provide counselling and treatment services to those visiting her for advice. The LHW's house may also serves as a vaccination post to vaccinate women and children in coordination with the area vaccinator. LHW is responsible to organize her community by forming health committee and women's groups. LHW submits her monthly report in the monthly 'continuing education' meeting at the health facility conducted by the concerned Lady Health Supervisor. She is replenished with medicines and supplies consumed during last month.

## **Community Midwives (CMWs)**

Community Midwives (CMWs) were introduced through the National Maternal, New-born and Child Health (MNCH) Programme in 2006. CMW is responsible to provide individualized care to the pregnant women throughout the maternity cycle and the new-born and ensure skilled birth attendance for home deliveries or at work/ birthing station established by her. The catchment population for a CMW is around 5000. In some areas, Lady Health Visitors (LHV), mostly based at PHC centre, also offer home-based delivery services. Considering rapidly increasing institutional deliveries across the country, the need for community midwives is less comparatively in large urbanized districts. Whereas in remote and socio-economically poor districts, this is among the few options to ensure skilled birth attendance.

## **Community based services to prevent HIV & AIDS**

Community based services are also offered through workers of community-based organizations in HIV & AIDS high-risk populations to ensure provision of preventive services. These services are usually offered to injecting drug users, sex workers, bridging population etc.

In addition, community level services are also offered by the out-reach workers including Vaccinators, Health, Population Welfare Councillors, Environmental technicians, Lady health supervisors and other health facility staff. For some interventions, other volunteers also contribute to delivery of services e.g., polio campaign, deworming campaign, Vit A supplementation, etc. Nomenclature varies in different provinces. Activities related to out-reach workers have been accounted for mostly at the PHC centre level.

## **Primary healthcare centre level health system**

There are different types of primary healthcare centre level facilities in rural areas commonly known as Basic Health Unit (BHU), BHU 24/7 Plus and Rural Health Centre (RHC), Rural Health Centre Plus while in urban areas, comparable types of PHC facilities are Dispensary, Medical/ MCH centre Urban Health Centres (UHCs) while in private sector different types of comparable PHC facilities are General Physician (GP) Clinic, Medical centre and Nursing/ maternity homes etc.

A brief explanation of three types of PHC centre facilities in public and private sector are as following:

### **Basic Health Unit/ Civil Dispensary/ General Practitioner Clinic**

Dispensary is the oldest type of a primary healthcare facility mainly in urban areas. After Alma Ata, Basic Health Units (BHUs) were established country wide, mainly in rural areas, to work as the first formal point of contact to access primary healthcare services. Ideally, each Union Council or Ward (lowest administrative unit) should have one PHC centre usually serving a population of around 5,000 to 25,000. Usually, these health facilities offer basic primary healthcare services, which include provision of static and outreach services for maternal & childcare, immunization, family planning, management of diarrhoea, pneumonia, control of communicable diseases and management of common ailment along with health education activities. These facilities are also responsible for provision of management and logistic support to LHWs and other community-based service providers. These facilities offer services usually 8 hours/ 6 days a week.

### **24/7 BHU / MCH Centre / Medical Centre**

With increasing population and to ensure 24/7 delivery services, the concept of 24/7 BHU emerged. In comparison to BHU, 24/7 BHU is envisaged to provide wider range of services including round the clock delivery services. 24/7 BHU is envisaged to serve a catchment population of 25,000 – 40,000. It is important to offer wide range of services, infrastructure, human resources, equipment and supplies should also be ensured at the facility. Khyber Pakhtunkhwa has recently decided to upgrade some BHUs to offer 24/7 services especially for delivery care. Already MCH centres and private clinics are offering such services round the clock.

### **Rural Health Centre / Health Centre/ Nursing Homes**

Rural Health Centre (RHC) functions around the clock and serve a catchment area population of 40,000–80,000 or even more, providing a comprehensive range of primary health care services and basic indoor facilities. The services envisaged to be provided at RHC include health education services, general treatment services, Basic Emergency Obstetric & New-born Care (BEmONC) services, emergency services such as management of injuries, accident, selected surgical services such as stitching, abscess drainage, circumcision etc. and first aid services to stabilize the patient in emergency conditions and refer them to higher level of care in case of complications. RHCs also provide clinical, logistical and managerial support to the BHUs, LHWs, MCH Centres, and Dispensaries that fall within its geographical limits. RHC provides medico-legal, basic surgical, dental and ambulance services. RHCs are equipped with laboratory and X-ray facilities and a 20 bedded inpatient facility. Around 5-8 BHUs are linked with the RHC for referral and other administrative purposes.

Equivalent to RHC, there are private sector Health Centre, Nursing or Maternity homes mostly in urban areas and sometimes offer wider range of services including specialized services.

### **First level hospital health system**

First level hospital refers to the intermediate level of medical care that is provided by a specialist or facility upon referral from primary care and is designed to provide technical, therapeutic and diagnostic services. It requires more specialized knowledge, skills, and equipment than the primary care professional. Services are offered 24/7. Basic specialist consultation and hospital admissions fall into this category. First level hospitals include Tehsil Head Quarters (THQs), and District Head Quarter (DHQs) in public sector. The services provided at the hospitals are primarily curative in nature. Administratively, these hospitals are run by senior doctors or medical superintendents who oversee medical staff that comprises specialists, doctors, nurses, paramedics and other technicians.

Private hospital less than 50 beds are equivalent to THQ hospital while private hospitals having bed capacity more than 50 are equivalent to DHQ hospital.

### **Tehsil Head Quarter (THQ) hospital / 50 bedded Private hospitals**

The catchment population of THQ hospital is the population of that Tehsil and may vary from 80,000 to 1-1.5 million people or even more. Hospital beds in THQ hospital ranges from 40-120 depending upon the size of Tehsil. THQ hospital is supposed to provide basic (and sometimes Comprehensive Emergency Obstetrics and New-born Care (CEmONC), along with basic medical and surgical services. THQ hospital also provides services to those patients who are referred by RHCs, BHU, LHWs and CMWs.

### **District Head Quarters (DHQ) hospital / >50 bedded Private hospitals**

DHQ hospital serves the whole population of a district and population may vary from 1-3 million or more. Number of hospital beds range from 200-400 or more. DHQ hospitals are supposed to provide specialized curative care, diagnostics, inpatient and referral services. DHQ hospital provides services to patients referred by LHWs, CMWs BHUs, RHCs and THQ hospital.

### **Tertiary hospital (Public/ Private)**

A tertiary referral hospital provides tertiary care, which is a level of health care obtained from specialists in a large hospital after referral from the providers of primary care and secondary care. Tertiary hospital that usually has a full complement of services including paediatrics, obstetrics, general medicine, gynaecology, various branches of surgery and psychiatry. Specialty hospital are dedicated to specific sub-specialty care (paediatric centres, oncology centres, psychiatric hospitals). Patients will often be referred from smaller hospitals to a tertiary hospital for major operations, consultations with sub-specialists and when sophisticated intensive care facilities are required.

Tertiary hospital may also be attached with a Medical Teaching Institute. Tertiary hospitals are not present in all districts but in districts with large population and also serve the neighbouring districts.

Most of the tertiary hospitals in Punjab have been given autonomy under medical teaching institution bill, to ensure efficiency gain and improve quality of services. Such autonomy also helps in generating other financial resources, which could be used to further improve the quality of health services.

### **Population level**

Federal and Provincial governments also carry out some interventions which benefit the whole population. Population-level health interventions are policies or interventions that shift the distribution of health risk by addressing the underlying social, economic and environmental conditions. These interventions might be policies designed and developed in the health sector, but may be implemented in sectors elsewhere, such as media or education.

## **DISTRICT LEVEL ESSENTIAL PACKAGE OF HEALTH SERVICES**

### **(Community, PHC Centre and First Level Hospital)**

UHC Benefit Package/ Essential Package of Health Services (EPHS) offers a futuristic vision in the health sector to set strategic direction and accordingly implement prioritized interventions to make progress on achieving Universal Health Coverage/ health-related Sustainable Development Goals.

Based on the evidence informed process outlined above, minimum of 103 interventions out of 218 recommended interventions by the DCP3/ 151 generic national EPHS were prioritized for immediate implementation by stakeholders to be included in the Punjab District level EPHS at the Community, PHC centre and First Level Hospital. Remaining interventions were identified as high priority to be implemented provided resources are available whereas 9 were identified to be implemented through special initiatives with additional support of national and/or provincial governments. Other interventions can also be offered once EPHS interventions are fully offered.

The immediate, high priority and special initiative interventions are categorized to four clusters (i: RMNCAH&N cluster; ii: Infectious diseases cluster; iii: Non-communicable disease cluster; and iv: health services access cluster). However, for ease of understanding, some interventions have been merged or broken down further. After that these interventions were re-classified according to lifecycle approach into following 12 categories:

1. Reproductive health/ birth spacing
2. Antenatal care
3. Delivery care
4. Post-natal care
5. New-born care
6. Nutrition
7. Child care
8. School age child care
9. Adolescent health
10. Infectious diseases
11. Non-communicable diseases
12. Health services access

First nine categories are part of RMNCH/ life cycle cluster. The description in the following section reflects the prioritized set of District level EPHS interventions:

#### **EPHS at Community level**

The package of services that are being proposed at the community level reflect the community needs, burden of disease, cost-effectiveness of interventions and the contextual factors to ensure delivery of efficient, effective and quality services at the doorstep. The health care workers, service providers and community-based organizations will provide the proposed services in the communities. Service providers include Lady Health Workers, Lady Health Visitor, Population Welfare Councillor and workers of Community-Based Organizations. These frontline workers also get backup support from the out-reach workers including CDC/Environmental Technicians, Vaccinators, Lady Health Supervisors and other health facility staff. The interventions among twelve categories are provided in the following box.

## COMMUNITY LEVEL INTERVENTIONS

### Reproductive Health/ Birth spacing

- Education and counselling on birth spacing during antenatal and post-natal care (LHW, CMW, LHV)
- Provision of condoms, hormonal pills and injectable contraceptives (LHW, CMW, LHV)
- Referral and linkages for IUCD insertion (LHW)
- Referral and linkages for surgical contraceptive methods (LHW)

### Antenatal Care

- Counselling on providing thermal & kangaroo care to new-born (LHW, CMW, LHV)
- Counselling on breastfeeding and growth monitoring (LHW, CMW, LHV)
- Monthly monitoring of pregnant women using MCH card and referral to Skilled birth attendant (LHW)
- Nutrition counselling and provision of Iron and folic acid to pregnant women (LHW)
- Referral/ immunization for TT immunization (CBAs and Pregnant women) (LHW, CMW)
- Screening for hypertension during pregnancy and immediate referral (LHW, CMW, LHV)

### Delivery Care

- Referral to skilled birth attendant for low risk labour and delivery (LHW)
- Identification of danger signs and referral to BEmONC or CEmONC facility considering complications (LHW, CMW, LHV)
- Low risk normal delivery (Only where CMW or LHV is available)

### Post-Natal Care

- Use of PNC checklist for mother within 24 hours after delivery (LHW) +3 follow up visits for 40 days after delivery (LHW, CMW)
- Education and counselling on birth spacing during post-natal care and service provision/ referral (LHW, CMW)

### New-born Care

- Use of PNC checklist for new-born within 24 hours after delivery (LHW) + care of new-born including care of cord (3 follow up visits) (LHW, CMW, LHV)
- Early initiation of breastfeeding (within ½ hour of birth) and initiation of growth monitoring (LHW, CMW, LHV)
- Ensuring thermal & kangaroo care to new-born (LHW)
- Ensure initiation of immunization for BCG and zero dose polio (LHW with support of area Vaccinator)

### Nutrition

- Screening for malnutrition in children; growth monitoring, ensure provision of food supplements for moderately acute malnourished cases and refer severely acute malnourished cases to stabilization centre (LHW, PW councillor)
- Ensure provision of vitamin A (after National immunization days are stopped) and zinc supplementation (LHW, PW councillor, etc)
- Provision of micro-nutrients (iron and folic acid), ensure food supplementation to women/adolescent girls (LHW)

### Child care

- Community based integrated management of childhood illnesses (LHW); immediate referral for complications and danger signs and follow up visits (LHW, PW councillor)

- Childhood Vaccination (BCG, Polio 0,1,2,3, Penta 1,2,3, Pneumococcal 1,2,3, Rota 1,2, Measles 1,2) – Typhoid vaccine from 2022 (LHW, PW councillor with support of Vaccinator)
- Education on handwashing and safe disposal of children's stool (LHW, PW councillor)

### School age Child Care

- Education of schoolchildren on oral health (LHW, PW councillor)
- Vision pre-screening and referral if required (LHW, PW councillor)
- School based HPV vaccination of girls (vaccinator, LHV) – after 2022-23 and through special initiative
- Drug administration against soil-transmitted helminthiasis (LHW, PW councillor, volunteer)

### Adolescent Health

- Education and counselling for prevention of sexually transmitted infection, screening and referral (LHW)

### Infectious Diseases

- Community based HIV testing, counselling and referral (In high risk groups by CBO worker)
- Provision of condoms and disposable syringes (In high risk groups by CBO worker)
- Health education on Hepatis B and C and referral of suspected cases (LHW, PW councillor)
- Health education on STI and HIV (LHW, CBO worker)
- Systematic screening and routine contact tracing exposed to Tuberculosis (LHW, CBO worker)
- Referral of malaria suspect (LHW, PW councillor)
- Conduct larvicidal and water management (LHW & PW councillor with backup support from CDC/ Environmental technician)
- Identification and referral of suspected cases of Dengue, Influenza, Trachoma etc. (LHW, PW councillor)
- Identification, reporting and referral of notifiable diseases (LHW, PW councillor and CDC/ Environmental technician) - Conduct simulation exercises/ training

### Non-Communicable Diseases

- Exercise based pulmonary rehabilitation of COPD (LHW)
  - Screening for hypertension (LHW)
  - Health education on CVD prevention (LHW, PW councillor)
  - Health education on Diabetes (LHW, PW councillor)
  - Self-managed treatment of migraine (LHW)
  - Clap test for screening of congenital hearing loss among new-born and referral (LHW, CMW)
  - WASH behaviour changes interventions (LHW, PW councillor with backup support from CDC/ Environmental technician)
- ### Health Services Access
- Health education on dental care (LHW, PW councillor)
  - Health education scabies, lice and skin infections (LHW, PW councillor)
  - First aid, dressing and care of wounds and referral (LHW)
  - Identification and screening of early childhood development issues and referral (LHW)
  - Basic management of musculoskeletal injuries and disorders and referral (LHW)

## EPHS at PHC centre level

The prioritized interventions are again based on the life-cycle approach which should be offered at the PHC centre. However, scope of interventions will vary considering different types of PHC centre. The following box reflect the essential services across different types of PHC centres.

PHC CENTRE LEVEL INTERVENTIONS				
Sr. No.	Intervention	Yes / No		
		8/6 BHU (Rural) Dispensary (Urban) GP Clinic (Pvt)	24/7 BHU (Rural) Medical Centre (Urban) Medical centre (Pvt)	24/7 RHC (Rural) Health Centre (Urban) Nursing Home (Pvt)
<b>Reproductive Health/ Birth Spacing</b>				
1.	Education and counselling on birth spacing during antenatal and post-natal / post abortion care	Yes	Yes	Yes
2.	Provision of condoms, hormonal pills, emergency contraceptive pills and injectable contraceptives	Yes	Yes	Yes
3.	Insertion and removal of intrauterine device (IUD)	Yes	Yes (12/7)	Yes (24/7)
4.	Surgical contraceptive methods	Yes (Referral and Linkages)	Yes (Referral and Linkages)	Yes (Organize mini-lap camps and referral)
<b>Antenatal care</b>				
5.	Counselling on providing thermal & kangaroo care to newborn	Yes	Yes	Yes
6.	Counselling on breastfeeding and growth monitoring	Yes	Yes	Yes
7.	Monitoring of pregnant women using MCH card (at least 4-8 ANC visits)	Yes	Yes (12/7)	Yes (24/7)
8.	Nutrition counselling and provision of Iron and folic acid to pregnant women	Yes	Yes	Yes
9.	Immunization against tetanus (CBAs and Pregnant women)	Yes	Yes	Yes
10.	Screening and care/ referral for hypertensive disorders in pregnancy	Yes	Yes (24/7 Care & referral)	Yes (24/7 Care & referral)
11.	Diabetes care in pregnancy	Yes (Only screening and Referral)	Yes (Screening and Referral for diabetes care in pregnancy)	Yes (Screening and Referral for diabetes care in pregnancy)
<b>Delivery Care</b>				
12.	Low risk Labour and Delivery	No (Yes where feasible) (Only Referral)	Yes (24/7 services for low-risk labour & delivery and basic neonatal resuscitation (Availability of seven signal functions for BEmONC)	Yes (Services for low-risk labour / delivery and managing complications; Basic neonatal resuscitation (Availability of seven signal functions for BEmONC)
13.	Identification and referral for complications and danger signs	Yes (Referral to 24/7 BEmONC or CEmONC facility)	Yes (24/7 Referral to CEmONC facility)	Yes (24/7 Referral to CEmONC facility)
14.	Management of premature rupture of membranes, including administration of antibiotic	No	No	Yes
15.	Management of miscarriage or post-abortion care	No	No	Yes

## PHC CENTRE LEVEL INTERVENTIONS

		Yes / No		
Sr. No.	Intervention	8/6 BHU (Rural) Dispensary (Urban) GP Clinic (Pvt)	24/7 BHU (Rural) Medical Centre (Urban) Medical centre (Pvt)	24/7 RHC (Rural) Health Centre (Urban) Nursing Home (Pvt)
<b>Post-Natal Care</b>				
16.	Post-natal care services +3 follow up visits	Yes	Yes (12/7)	Yes (24/7)
17.	Education and counselling on birth spacing during post-natal/ post abortion care	Yes	Yes	Yes
<b>New-born Care</b>				
18.	New-born care including care of cord (follow up visits) management of Birth asphyxia (nonbreathing baby)	Yes	Yes	Yes
19.	Early initiation of breastfeeding (within ½ hour of birth) and initiation of growth monitoring	Yes	Yes	Yes
20.	Ensuring thermal & kangaroo care to new-born	Yes	Yes	Yes
21.	Initiation of immunization for BCG and zero dose polio & birth dose of Hepatitis-B	Yes	Yes	Yes
<b>Nutrition</b>				
22.	Screening for malnutrition in children; growth monitoring, provision of food supplements for moderately acute malnourished cases and refer severely acute malnourished cases to stabilization centre	Yes	Yes (12/7)	Yes (24/7)
23.	Provision of vitamin A (after National immunization days are stopped) and zinc supplementation	Yes	Yes	Yes
24.	Provision of micro-nutrients (iron and folic acid) and food supplementation to women and adolescent girls	Yes	Yes	Yes
<b>Child Care</b>				
25.	Integrated management of childhood illnesses; immediate referral for danger signs and follow up visits	Yes	Yes (12/7)	Yes (24/7)
26.	Childhood Vaccination (BCG, Polio 0,1,2,3, Penta 1,2,3, Pneumococcal 1,2,3, Rota 1,2, Measles & Rubella 1,2)	Yes	Yes	Yes
27.	Education on handwashing and safe disposal of children's stool	Yes	Yes	Yes
<b>School-age Child Care</b>				
28.	Education and counselling on oral health	Yes	Yes	Yes
29.	Vision pre-screening and referral if required	Yes	Yes	Yes
30.	Drug administration against soil-transmitted helminthiasis	Yes	Yes	Yes
<b>Adolescent Health</b>				
31.	Syndromic management of common sexual and reproductive tract infections	Yes	Yes	Yes
32.	Psychological treatment of depression, anxiety and disruptive behaviour disorders among adolescent; referral if required	Yes	Yes	Yes
33.	Post gender-based violence care including counselling and referral	No	No	Yes
<b>Infectious Diseases</b>				
34.	HIV testing, counselling and referral for ART	No	No	Yes
35.	Hepatis B and C testing and referral	No	Yes	Yes
		(Only Health education on Hepatis B and C)		
36.	Partner notification and expedited treatment for STI and referral for HIV	No	Yes	Yes
		(Only Health education on STI and HIV)		
37.	Diagnosis and treatment of Tuberculosis (TB)	No	No (only referral of suspected cases)	Yes (Referral of MDR cases)
		(Only Referral of suspected cases)		

## PHC CENTRE LEVEL INTERVENTIONS

Sr. No.	Intervention	Yes / No		
		8/6 BHU (Rural) Dispensary (Urban) GP Clinic (Pvt)	24/7 BHU (Rural) Medical Centre (Urban) Medical centre (Pvt)	24/7 RHC (Rural) Health Centre (Urban) Nursing Home (Pvt)
38.	Screening of HIV in all individuals with a diagnosis of active TB	No	No	Yes
39.	Screen for TB in all newly diagnosed PLHIV and close contacts	No	No	Yes
40.	Malaria-suspect to be diagnosed with RDT and treatment for positive cases	Yes	Yes	Yes (Pre-referral treatment in severe and complicated cases)
41.	Early detection and referral of Dengue and Trachoma cases	Yes	Yes	Yes
42.	Identification, reporting and referral of notifiable diseases (Conduct simulation exercises/ training)	Yes	Yes	Yes
<b>Non-Communicable Diseases</b>				
43.	Low dose corticosteroid and bronchodilator for Asthma and selected COPD	Yes	Yes (12/7 with Nebulizer)	Yes (24/7 with Nebulizer)
44.	Cardiovascular risk factor screening using non-lab-based tools and regular follow up	Yes	Yes (12/7)	Yes (24/7)
45.	Provision of aspirin for suspected acute myocardial cases	Yes	Yes	Yes
46.	Screening of albumin urea kidney disease in diabetics	Yes	Yes	Yes
47.	Secondary prophylaxes with penicillin for Rheumatic fever	Yes	Yes	Yes
48.	Treatment of acute pharyngitis	Yes	Yes	Yes
49.	Self-managed treatment of migraine	Yes	Yes	Yes
50.	Support caregivers of patients with dementia	Yes	Yes	Yes
51.	Management of anxiety and depression disorders	Yes	Yes	Yes
52.	Calcium and Vit D supplementation for prevention of osteoporosis in high-risk individuals	Yes	Yes	Yes
53.	Screening of hearing loss using otoscope and basic management/ referral	Yes	Yes	Yes
54.	WASH behaviour changes interventions	Yes	Yes	Yes
<b>Health Services Access</b>				
55.	Dental Care	Yes (Dental pain and infection management)	Yes (Basic Dental care)	Yes (Treatment of caries, drainage of dental abscess, dental extraction)
56.	Drainage of superficial abscess (Treatment of scabies, lice and skin infections)	Yes	Yes (12/7)	Yes (24/7)
57.	Management of non-displaced fracture and referral	No	Yes (24/7)	Yes (24/7)
58.	Circumcision	No	Yes	Yes
59.	Suturing of small laceration	Yes	Yes (24/7)	Yes (24/7)
60.	Identification and screening of early childhood development issues	Yes	Yes	Yes
61.	Basic management of musculoskeletal injuries and disorders	Yes	Yes	Yes
62.	Laboratory Services	Yes (Basic and rapid diagnostic lab services)	Yes (Essential PHC lab services including radiology)	Yes (RHC level lab services + radiology)

The availability of laboratory and imaging services that are in compliance with the envisioned EPHS intervention package, is a key for effective provision of the EPHS interventions and reaching

diagnosis prior to initiating treatment. The following table presents the laboratory tests and imaging services across the PHC health facilities.

PHC CENTRE LEVEL LABORATORY & DIAGNOSTIC INTERVENTIONS				
Sr. No.	Intervention	Yes / No		
		8/6 BHU (Rural) Dispensary (Urban) GP Clinic (Pvt)	24/7 BHU (Rural) Medical Centre (Urban) Medical centre (Pvt)	24/7 RHC (Rural) Health Centre (Urban) Nursing Home (Pvt)
1.	Haemoglobin & Blood Complete Examination	Yes/No	Yes	Yes
2.	Blood Glucose Testing	Yes	Yes	Yes
3.	Lipid Profile	No	No	Yes
4.	Liver Function Tests	No	Yes	Yes
5.	Serum Uric Acid	No	Yes/No	Yes
6.	Renal function Test (Such as Serum Urea & Creatinine)	No	Yes	Yes
7.	Urine Chemistry (Qualitative and Quantitative Testing)	Yes (Only Qualitative)	Yes	Yes
8.	Onsite Malaria Testing	No	Yes	Yes
9.	Malaria Rapid Diagnostic Test (RDT)	Yes	Yes	Yes
10.	Gram Staining at facility	Yes/ No	Yes	Yes
11.	Stool Microscopy at Facility	Yes / No	Yes	Yes
12.	Onsite Tuberculosis Testing	No (only referral)	No (only referral)	Yes
13.	X-Ray Services	No	Yes	Yes
14.	ECG Services	No	Yes	Yes
15.	Ultrasound	No	Yes	Yes

### EPHS at First Level Hospital

The prioritized interventions are/ should be offered at the FLH. However, scope of interventions will vary considering different types of FLH (Tehsil or District) in public and private sector. The following box reflect the essential services across different types of FLH.

FIRST LEVEL HOSPITAL INTERVENTIONS			
Sr. No.	Intervention	Yes / No	
		Tehsil Headquarter Hospital / <100 bedded Private Hospital	District Headquarter Hospital / >100 bedded Private Hospital
<b>Reproductive Health/ Birth Spacing</b>			
1.	Early detection and referral / treatment of early-stage cervical cancer	Yes	Yes
2.	Insertion and removal of long-lasting contraceptives	Yes	Yes
3.	Tubal ligations	No	Yes
4.	Vasectomy	No	Yes
<b>Antenatal care</b>			
5.	Management of eclampsia with magnesium sulphate, including initial stabilization at health centres	Yes	Yes
6.	Screening and management of diabetes in pregnancy (gestational diabetes or pre-existing type II diabetes)	Yes	Yes
<b>Delivery care</b>			
7.	Surgical termination of pregnancy by maternal vacuum aspiration and dilatation & curettage	Yes	Yes
8.	Management of labour and delivery in high-risk women, including operative delivery (CEmONC)	No	Yes
9.	Management of maternal sepsis, including early detection at Health centre	No	Yes
<b>Postnatal care</b>			
	(Follow up visit of complicated delivery cases)	Yes	Yes
<b>New-born care</b>			
10.	Management of Neonatal sepsis, pneumonia and meningitis using	No	Yes

## FIRST LEVEL HOSPITAL INTERVENTIONS

Sr. No.	Intervention	Yes / No	
		Tehsil Headquarter Hospital / <100 bedded Private Hospital	District Headquarter Hospital / >100 bedded Private Hospital
11.	injectable and oral antibiotics Management of preterm premature rupture of membranes, including administration of antibiotics	Yes	Yes
12.	Management of new-born complications infections, meningitis, septicaemia, pneumonia and other very serious infections requiring continuous supportive care (such as IV fluids and oxygen)	No	Yes
13.	Full supportive care for preterm new-born	Yes	Yes
14.	Jaundice Management with Phototherapy	Yes	Yes
<b>Nutrition</b>			
	(Stabilization centres only in food-insecure districts)	-	Yes
<b>Child care</b>			
15.	Full supportive care for severe childhood infections with danger signs	Yes	Yes
<b>Infectious diseases</b>			
16.	For individuals testing positive for hepatitis B and C, assessment of treatment eligibility by trained providers followed by initiation and monitoring of ART when indicated	No	Yes
17.	Referral of cases of treatment failure for drug susceptibility testing; enrolment of those with MDR-TB for treatment per WHO guidelines	Yes (only diagnosis through Gene Xpert)	Yes (Diagnosis at all DHQ-treatment at selected)
18.	Evaluation and management of fever in clinically unstable individuals using WHO IMAI guidelines, including empiric parenteral antimicrobials and antimalarial and resuscitative measures for septic shock	No	Yes
<b>Non-communicable diseases</b>			
19.	Management of acute coronary exacerbations of asthma and COPD using systemic steroids, inhaled beta-agonists and if indicated oral antibiotics and oxygen therapy	Yes	Yes
20.	Management of acute coronary syndromes	No	Yes
21.	Medical management of acute heart failure	No	Yes
22.	Early childhood development rehabilitation interventions, including motor, sensory, and language stimulation	Yes	Yes
23.	Management of bowel obstruction	No	Yes
24.	Management of intoxication/ poisoning syndromes using widely available agents e.g., charcoal, naloxone, bicarbonate, antivenom	No	Yes
<b>Health services access</b>			
25.	Appendectomy	Yes	Yes
26.	Colostomy (Adult and Paediatrics) (Refer to tertiary hospital)	No	Yes
27.	Escharotomy or fasciotomy (Refer to tertiary hospital)	No	Yes
28.	Fracture reduction & placement of external fixator and use of traction for fractures	Yes	Yes
29.	Hysterectomy for uterine rupture or intractable postpartum haemorrhage	No	Yes
30.	Irrigation and debridement of open fractures (Refer to tertiary hospital)	No	Yes
31.	Management of septic arthritis	No	Yes
32.	Placement of external fixation and use of traction for fractures	No	Yes
33.	Relief of urinary obstruction by catheterization for fractures	Yes	Yes
34.	Removal of gallbladder, including emergency surgery	No	Yes
35.	Repair of perforations (for example perforated peptic ulcer, typhoid ileal perforation)	No	Yes
36.	Tube thoracostomy	Yes	Yes
37.	Trauma laparotomy	No	Yes
38.	Trauma related amputations	Yes	Yes
39.	Compression therapy for amputations, burns, and vascular or lymphatic disorders	Yes	Yes
40.	Cataract extraction and insertion of intraocular lens	No	Yes

The availability of laboratory and imaging services that are in compliance with the envisioned EPHS intervention package, is a key for effective provision of the EPHS interventions and reaching diagnosis prior to initiating treatment. The following table presents the laboratory tests and imaging services across the FLH care facilities.

FIRST LEVEL HOSPITAL LABORATORY & DIAGNOSTIC INTERVENTIONS			
Sr. No.	Laboratory / Diagnostic Tests	Yes / No	
		Tehsil Headquarter Hospital / <100 bedded Private Hospital	District Headquarter Hospital / >100 bedded Private Hospital
1.	Blood CP	Yes	Yes
2.	ESR	Yes	Yes
3.	Blood Culture & Sensitivity	No	Yes
4.	C-Reactive Protein	No	Yes
5.	Blood Grouping & Cross Matching	Yes	Yes
6.	Blood Smear	No	Yes
7.	Random and Fasting blood glucose	Yes	Yes
8.	Serum Electrolytes (Serum Potassium, sodium, Serum Magnesium)	Yes	Yes
9.	Serum Amylase, Lipase	No	Yes
10.	Creatinine Phosphokinase, Serum Lactate	No	Yes
11.	Serum Bilirubin	Yes	Yes
12.	Prothrombin time test, APTT, INR	Yes	Yes
13.	Blood Urea and Nitrogen	Yes	Yes
14.	Hepatitis B & C test	Yes	Yes
15.	Microscopy for malarial parasite	Yes	Yes
16.	Pregnancy Test	Yes	Yes
17.	Beta HCG	No	Yes
18.	Arterial Blood Gases	No	Yes
19.	LFTs	Yes	Yes
20.	RFTs	Yes	Yes
21.	Glucose-6-phosphate dehydrogenase (G6PD)	No	Yes
22.	Coomb's test	Yes	Yes
23.	Cardiac Troponin - T test	No	Yes
24.	Microscopy of Cerebral Spinal Fluid	Yes	Yes
25.	HIV Testing	Yes	Yes
26.	Urine Analysis	No	Yes
27.	Urine Culture & Microscopy test	Yes	Yes
28.	Urine Myoglobin	No	Yes
29.	Spot Urinary protein test	Yes	Yes
30.	High vaginal swab	No	Yes
31.	Semen analysis (sperm count)	Yes	Yes
32.	Lumbar Puncture	No	Yes
33.	Cytology (Pap smear or LBC) and Visual Inspection with Acetic acid (VIA)	No	Yes
34.	Molecular HPV testing	Yes	Yes
35.	Speculum, Vaginal & Rectal examination	No	Yes
36.	Intravenous pyelogram (IVP)	No	Yes
37.	Staining of smears for Ziehl-Neelsen or LED fluorescence microscopy	No	Yes
38.	APRI (AST-to-platelet ratio index)	No	Yes
39.	Liver Biopsy	No	Yes
40.	HBV & HCV Serological testing	Yes	Yes
41.	Nucleic Acid testing for HBV & HCV RNA	No	Yes
42.	line-probe assays (LPA) for direct detection of resistance mutations in acid-fast bacilli (AFB) smear-positive processed sputum samples	No	Yes
43.	Xpert MTB/RIF for use as the initial diagnostic test in individuals suspected of having MDR-TB	Yes	Yes
44.	<ul style="list-style-type: none"> <li>• Phenotypic DST (conventional DST)</li> <li>• Genotypic DST</li> </ul>	No Yes	No Yes
45.	Gastric Lavage	Yes	Yes

## FIRST LEVEL HOSPITAL LABORATORY & DIAGNOSTIC INTERVENTIONS

Sr. No.	Laboratory / Diagnostic Tests	Yes / No	
		Tehsil Headquarter Hospital / <100 bedded Private Hospital	District Headquarter Hospital / >100 bedded Private Hospital
46.	Pulse oximetry	Yes	Yes
47.	Ultra sound	Yes	Yes
48.	Chest X ray	Yes	Yes
49.	ECG	Yes	Yes
50.	Echo	No	Yes
51.	CT Scan	No	Yes
52.	CT scan with contrast	No	Yes
53.	X-ray Abdomen erect	Yes	Yes
54.	Radiograph of Limbs	Yes	Yes
55.	Joint Fluid Aspirate	No	Yes
56.	Fluid aspirate gram stain and culture	No	Yes
57.	Abdominal radiograph – erect and supine	Yes	Yes
58.	Ambulatory Xray (Portable)	Yes	Yes
59.	Ultrasound (to assess gestation age/IUGR) if needed	Yes	Yes
60.	Measurement of the compartment pressure (if Tonometer or Doppler Ultrasound available)	No	Yes
61.	Pelvic ultrasound (in case of ruptured uterus)	Yes	Yes
62.	Peri-apical radiograph	Yes	Yes
63.	Orthopantomogram	No	Yes
64.	Anti-cyclic citrullinated peptide (anti-CCP)	No	Yes
65.	Antinuclear antibody (ANA)	No	Yes
66.	Rheumatoid factor (RF)	No	Yes
67.	Uric acid	Yes	Yes
68.	Electrophoresis	No	Yes
69.	Blood test for sickle cell disease	No	Yes
70.	DNA testing (thalassemia specific)	No	Yes
71.	Thalassemia Test	No	Yes
72.	(Serum iron or Serum ferritin) (thalassemia specific)	No	Yes
73.	X-ray with a contrast material (barium X-ray)	No	Yes
74.	Dynamic swallowing study	No	Yes
75.	Fibreoptic endoscopic swallowing evaluation	No	Yes
76.	Manometry	No	Yes
77.	CD4 Testing	No	Yes
78.	Clinical chemistry panels (Automated analyser)	No	Yes
79.	RPR test for Syphilis	No	Yes
80.	FNAC	No	Yes
81.	Tissue Biopsy	No	Yes
82.	H & E staining	No	Yes

Note: Blue ones are essential for immediate implementation

## IMPLEMENTATION ARRANGEMENT

### Essential Infrastructure for Community, PHC Centre and FLH Interventions

Following the finalisation of the package, protocols in the government were reviewed. The investment required in each type of facility was estimated to ensure the package is delivered at sufficient quality. Investment in infrastructure is primarily relevant for the PHC centre and FLH level interventions.

At community level, LHW is also envisaged to establish a kit corner in her house-declared as health house. The space is used to store medicines and supplies and give counselling or treat minor illnesses to those patients/ clients visiting health house. This place should also display relevant protocols and posters. LHW should be provided with the necessary equipment and MIS tools. The health house may also serve as a vaccination post.

For CMW, it is proposed that a room in her community will serve as her work station, which is a place where pregnant mothers will contact for consultation, examination and delivery. CMW conducts safe delivery either at the CMW work station or at the woman's home and give women to choose the place of delivery. Privacy and hygiene practices should be ensured with availability of essential equipment, kit and furniture etc.

With regards to the PHC centre, the following guidelines should preferably be followed especially in the public sector.

- The suggested land area for a BHU / BHU Plus is 10 kanal, while for a RHC 24 kanal land is required to ensure provision of all essential in-patient and outpatient services. Estimated construction cost of the building currently ranges from Rs.3,200 to 3,500 per square foot.
- In a RHC, 20 bedded indoor facility is recommended i.e. 10 bedded ward for male patients and 10 bedded ward for female patients. At the BHU Plus, there should be at least two bedded facility for institutional delivery.
- While choosing the location for a health facility, it should be ensured that the site has metal road access, electricity supply, adequate water supply, gas supply and communication lines for telephone/ mobile phone. The building should be built in a manner to ensure adequate sunlight and cross ventilation and as per government rules.
- The facility compound should have a boundary wall with gate and a facility sign board. A board with listed services, opening times and emergency contacts during closing times should be displayed, adjacent to the main gate so that it is easily visible to people. The text should be in an understandable format and in local and national language.
- The health facility area should have a rubbish pit for disposal of refuse and medical waste. The surroundings of the health facilities should be kept clean with no reservoirs of stagnant/unclean water, which could serve as vector breeding sites.
- The entrance of the building should have a ramp to facilitate physically challenged patients on wheel chairs or stretchers. Wheel chairs & stretchers should be available near to the main gate to transfer the patient in minimum time to emergency or OT.
- The entrance of the health facility building should have adequate light and ventilation with space for registration and record room, drug dispensing room, and waiting area for patients. The waiting area should have adequate seating arrangements, functional fans/AC and

provide protection from extremes of weather. Health education material should be displaced in waiting areas.

- The waiting area should have a list of all fees in local and national languages and a complaint/suggestion box which patients can use to provide feedback on the services.
- Clean drinking water should be available in the facility. Preferably piped water with water storage facility should be available within the facility.
- Separate functional toilets for male and female staff and clients/patients/attendants should be available, while ensuring cleanliness.
- Privacy of patient should be ensured with availability of adequate numbers of functional curtains/screens in the examination room.
- A kitchen should be available for inpatients at RHCs. Cooking should be strictly limited to the kitchen. However, the option of contracting out the food services may also be considered.
- The labour room at the 24/7 BHU and RHCs should have an attached toilet, drinking water facility, and a designated space for new-born care. Privacy should be ensured for patients.
- At the RHC, the Operation theatre area should have a changing room, sterilization area operating area and washing area. Separate storage facility for sterile and unsterile equipment/ instruments should be available within the operation theatre.
- Dressing room/ procedure room/ injection room should be well equipped with all the emergency drugs and instruments in all PHC facilities.
- Laboratory should have sufficient space with work stations and separate area for collection and screening of samples should be available. The lab should have marble/stone table top for platform and wash basins.
- Separate area for storage of sterile and common linen and other materials/ drugs/ consumables. The area should be well-lit and ventilated and should be rodent/pest free.
- Besides the above, the health facility should have
  - Dispensing cum store area
  - Vaccine storage and immunisation area
  - BCC and family planning counsel area
  - Office room
  - Utility room for dirty linen and used items
- Laundry: RHC should have its own arrangement for safe washing of bed linen, blankets, sheets etc. used in different areas. The BHUs and BHUs Plus are proposed to send their laundry to the RHCs as per need or there should be a contractual arrangement for linin washing.
- Decent Residential Accommodation with all the amenities, like 24-hrs water supply, electricity, etc. should be available for medical officers, paramedical staff, support staff, and for peon/chowkidar.

The infra structure and basic amenities, recommended at PHC centre facilities are as following:

## PHC CENTRE LEVEL INFRASTRUCTURE NEEDS

Sr. No.	Infrastructure	Yes / No		
		8/6 BHU (Rural) Dispensary (Urban) GP Clinic (Pvt)	24/7 BHU Medical Centre (Urban) Medical centre (Pvt)	24/7 RHC (Rural) Health Centre (Urban) Nursing Home (Pvt)
1.	Land required	10 Kanal (BHU)	10 Kanal (BHU Plus)	24 Kanal (RHC)
2.	Central registration point/ reception (with computerized/ paper records)	Yes	Yes	Yes
3.	Medical officer In-charge room with washroom	No	No	Yes
4.	Medical officer room with washroom	Yes	Yes	Yes
5.	WMO room with washroom	No	Yes	Yes
6.	Examination & procedure room	No	Yes	Yes
				(MO and minor procedure room)
7.	LHV room with washroom	Yes	Yes	Yes
8.	Labour room	No	Yes	Yes
9.	Operation Theatre (OT) with scrub/washing area, changing room, sterilization room and generator room	Yes	Yes	Yes
10.	Indoor Wards with nursing station and washrooms	No	No (Two beds maternity room)	Yes (20 beds, 10 each for males and females)
11.	Dental room with washroom	No	Yes	Yes
12.	Waiting areas with washrooms	No	Yes	Yes
13.	Dispensary	Yes	Yes	Yes
				(Dispensary and dressing area)
14.	EPI room with regular & alternate electricity system	Yes	Yes	Yes
15.	Health education / Training room/ ORT corner	Yes	Yes	Yes
16.	Laboratory	Yes (Mini-Lab)	Yes	Yes
17.	X-ray room with darkroom facility	No	Yes	Yes
				(Radiology room with darkroom)
18.	Storeroom	Yes	Yes	Yes
19.	Ramps for disabled	Yes	Yes	Yes
20.	Kitchen	No	No	Yes
21.	Mortuary and postpartum room	No	No	Yes
22.	Garage	No	Yes	Yes
23.	Boundary wall	Yes	Yes	Yes
24.	Residences for staff	Yes	Yes	Yes
25.	Waste disposal area with proper infection control measures / protocols	Yes	Yes	Yes
26.	Water supply & storage facility	Yes	Yes	Yes
27.	Green area with plantation	Yes	Yes	Yes
28.	Carpeted road access	Yes	Yes	Yes
29.	Electricity, Water and Gas Facility	Yes	Yes	Yes
30.	Telephone and Internet	Yes	Yes	Yes
31.	Facility Sign board	Yes	Yes	Yes
32.	Board with listed services, opening times and emergency contacts	Yes	Yes	Yes
33.	Fuel operated generator	No	Yes	Yes

With regards to FLH, following guidelines should preferably be followed especially in the public sector.

The suggested land area for THQ and DHQ level hospitals is as following to ensure provision of all essential in-patient and outpatient services:

- a) THQ hospital – 40-120 bedded capacity - 7 ha/138 Kanals (350 m<sup>2</sup>/0.69 Kanals per bed)

b) DHQ- 250-350+ bedded capacity - 10 ha/198 Kanals (333 m<sup>2</sup>/0.65 per bed)

These areas are for the hospital buildings only, excluding the area needed for staff housing.

- The site must be large enough for all the planned functional requirements to be met and for any expansion envisioned within the coming ten years.
- While choosing the location for a health facility, it should be ensured that the site has metal road access, electricity supply, adequate water supply, storm-water disposal gas supply and communication lines for telephone/ mobile phone.
- The building should be built in a manner to ensure adequate sunlight and cross ventilation and as per government rules.
- In areas where such utilities are not available, substitutes must be found, such as a deep well for water, generators for electricity and radio communication for telephone.
- It should be in an area free of pollution of any kind, including air, noise, water and land pollution.
- The hospital compound should have a boundary wall with gate and a facility sign board. A board with listed services, opening times and emergency contacts during closing times should be displayed, adjacent to the main gate so that it is easily visible to people. The text should be in an understandable format and in local and national language. Large DHQ hospital should have incinerator.
- The hospital area should have a rubbish pit for disposal of refuse and medical waste. The surroundings of the health facilities should be kept clean with no reservoirs of stagnant/unclean water, which could serve as vector breeding sites.
- The entrance of the building should have a ramp to facilitate physically challenged patients on wheel chairs or stretchers.
- The entrance of the hospital building should have adequate light and ventilation with space for registration and record room, drug dispensing room, and waiting area for patients.
- The waiting area should have adequate seating arrangements, functional fans/AC and provide protection from extremes of weather. Health education material should be displaced in waiting areas.
- The waiting area should have a list of all fees in local and national languages and a complaint/suggestion box which patients can use to provide feedback on the services.
- Clean drinking water should be available in the facility. Preferably piped water with water storage facility should be available within the facility.
- Separate functional toilets for male and female staff and clients/patients/attendants should be available, while ensuring cleanliness.
- Privacy of patient should be ensured with availability of adequate numbers of functional curtains/screens in the examination room, along with attendant of same gender.
- A kitchen should be available for Inpatients at THQs/DHQs. Cooking should be strictly limited to the kitchen. However, the option of contracting out the food services may also be considered.

- The labour room at the THQs and DHQs should have an attached toilet, drinking water facility, and a designated space for new-born care with required equipment like suction machine. Privacy should be ensured for patients.
- At the FLH facilities, the operation theatre area should have a changing room, sterilization area, operating area, and washing area. Separate storage facility for sterile and unsterile equipment. Autoclave machine/instruments should be available within the operation theatre.
- Dressing room/ procedure room/ injection room should be well equipped with all the emergency drugs and instruments in all FLH facilities.

Besides the above, the health facility should have

- Dispensing cum store area
  - Vaccine storage and immunization area
  - BCC and family planning counsel area
  - Utility room for dirty linen and used items
- Laboratory should have sufficient space with work stations and separate area for collection and screening should be available. The lab should have marble/stone table top for platform and wash basins.
  - Separate area for storage of sterile and common linen and other materials/ drugs/ consumables. The area should be well-lit and ventilated and should be rodent/pest free.
  - All FLH facilities should have its own arrangement for safe washing of bed linen, blankets, sheets etc. used in different areas. There should be a contractual arrangement for linen washing.
  - Decent residential accommodation with all the amenities, like 24 hours water supply, electricity, etc. should be available for medical officers, paramedical staff, support staff and for peon/chowkidar.

The infrastructure and basic amenities recommended at FLH center facilities are as follows:

FIRST LEVEL HOSPITAL INFRASTRUCTURE AND BASIC AMENITIES			
Sr. No.	Infrastructure and Basic Amenities	Yes / No	
		Tehsil Headquarter Hospital / <50 bedded Private Hospital	District Headquarter Hospital / >50 bedded Private Hospital
1.	Central registration point/reception with computerized and paper records	Yes	Yes
2.	Central registration point Emergency room	Yes	Yes
3.	Medical Officer In-charge room with washroom	Yes	Yes
4.	Medical Officers rooms with washroom	Yes	Yes
5.	WMO rooms with washroom	Yes	Yes
6.	Offices for senior staff, senior medical staff and admin/accounts	Yes	Yes
7.	Examination & Procedure room	Yes	Yes
8.	LHV / Population welfare rooms with washroom	Yes	Yes
9.	Medical and non-medical stores in the ward	Yes	Yes
10.	Labour room	Yes	Yes
11.	Operation Theatre (OT) with scrub / washing area, changing room, sterilization room and generator room	Yes	Yes
12.	ICU/CCU	No	Yes
13.	Preoperative room	Yes	Yes
14.	Recovery Room	Yes	Yes
15.	Indoor wards with nursing station and washrooms	Yes	Yes

## FIRST LEVEL HOSPITAL INFRASTRUCTURE AND BASIC AMENITIES

Sr. No.	Infrastructure and Basic Amenities	Yes / No	
		Tehsil Headquarter Hospital / <50 bedded Private Hospital	District Headquarter Hospital / >50 bedded Private Hospital
16.	Dental room with washroom	Yes	Yes

42.	Main stores for non-medical items	Yes	Yes
43.	Public washroom	Yes	Yes
44.	Drinking Water dispensers	Yes	Yes
45.	Parking area (with shades) for staff and visitors	Yes	Yes

### Essential Human Resources for Health

Human Resources for Health (HRH) plays a central role in delivery of essential health services and for achieving UHC. HRH is a critical factor in long term planning, implementation and sustaining of health care services. The human resource for the PHC centre is inevitable in view the range of essential health services/ interventions which are prioritized.

At the community level, LHW, fulfilling the criteria, is required to cover around 1,500 population. To ascertain the total number of required LHWs, a standard of 100 percent coverage of the rural areas and 30 percent coverage for urban areas, focussing on the urban slums/densely populated communities is recommended. A CMW should be deployed to cover a population of minimum 5,000 people and this cadre is not recommended for urban and socio-economically better off areas as institutions are usually available. Each union council should have at least two vaccinators to provide vaccination services in the PHC centre and community. Also, the CDC/Environmental technician and Population Welfare (PW) councillors are recommended as outreach workers. For some of the interventions such as HIV, the Community Based Organisations (CBOs) staff working in the community where high-risk population is concentrated. Linkages with the First Level/ Tertiary hospital staff may be ensured through digital health technology.

The essential human resources across the PHC centre level is reflected in the following table.

## PHC CENTRE LEVEL HUMAN RESOURCES FOR HEALTH

Sr. No.	HRH	Yes / No		
		8/6 BHU (Rural) Dispensary (Urban) GP Clinic (Pvt)	24/7 BHU (Rural) Medical Centre (Urban) Medical centre (Pvt)	24/7 RHC (Rural) Health Centre (Urban) Nursing Home (Pvt)
1.	Medical Officer In charge	1	1	1 (Senior)
2.	Gynaecologist/ Obstetrician (optional)	0	PG students on rotation	1
3.	Medical Specialist (optional)	0	0	1
4.	District/ General Surgeon (optional)	0	0	1
5.	Paediatrician, Eye and ENT specialist (optional)	0	0	(on rotation)
6.	Male Medical Officer	1	2	3
7.	Women Medical Officer	0	2	3
8.	Medico-legal Officer	0	0	1
9.	Dental Surgeon	0	0	1
10.	Head Nurse	0	0	1
11.	Staff Nurse	0	2	6

76.	Telephone Operator	Yes	Yes
77.	Physiotherapy Aide / technician	Yes	Yes
78.	Stretcher Bearer	Yes	Yes
79.	Ambulance Driver	Yes	Yes
80.	Statistical Assistant	Yes	Yes
81.	Operation Theatre Attendants	Yes	Yes
82.	Sanitary Inspector/ Patrol	Yes	Yes
83.	Lab Attendants	Yes	Yes
84.	Ward Servants	Yes	Yes
85.	Ward Cleaners	Yes	Yes
86.	Electrician	Yes	Yes
87.	Air Conditioner Technicians	Yes	Yes
88.	Tailor	Yes	Yes
89.	Dhobi/Washerman	Yes	Yes

\*Cooking, washing and sanitary services may be contracted out

- Staff mentioned in **Blue font** is critical to ensure immediate essential interventions

- Number of staff positions will vary as per sanctioned list

### Essential Medicines and Supplies

Considering implementation of prioritized interventions for the EPHS at community and PHC centre level, the essential medicines and supplies have been mentioned in this section (in blue font). However, some additional medicines and supplies have also been included which health care providers use as alternate medicines or for management of other common illnesses (in black font).

At the community level, the essential medicines and supplies defined by the Lady health Workers' programme are as following:

## Essential Medicines and Supplies at Community Level

### For Lady Health Worker

- Tab Paracetamol
- Syrup Paracetamol
- Syrup Amoxicillin
- Tab Mebendazole
- ORS (Sachet)
- Syrup Zinc
- Eye ointment
- Tab. Ferrous salt + Folic Acid
- Syrup B complex
- Benzyl Benzoate Lotion
- Condoms
- Oral Contraceptive Pills/ emergency pill
- Injectable contraceptive (Depo Provera) with syringes
- Antiseptic Lotion
- Cotton Bandages
- Cotton roll

### For other community level interventions

- Vaccine along with auto-destructible syringes and cold chain
  - BCG Vaccine
  - Oral Polio Vaccine
  - Injectable Polio Vaccine
  - Hepatitis B Vaccine
  - Measles Vaccine
  - Tetanus Toxoid
  - Pentavalent Vaccine
  - Pneumococcal Vaccine
  - Rota vaccine
- Clean Delivery kits (for LHV)
- Vitamin A
- Deworming medicines
- Medicines and supplies for high-risk populations
- (RUSF, RUTF, MMS, MMT provision at community level to be explored especially in food insecure areas)

Following groups of essential medicines have been proposed at the 8/6 BHUs, 24/7 BHUs, and RHCs considering the conditions/illnesses that are proposed to be managed in the EPHS package of services.

## Groups of Essential Medicines and Supplies at PHC centre and FLH

- |   |   |
|---|---|
| <ul style="list-style-type: none"> <li>– Anaesthetics (Local)</li> <li>– Analgesics (NSAIDs)</li> <li>– Anti-Allergic (Anaphylaxis)</li> <li>– Antidotes and other substances used in poisoning</li> <li>– Anti-Epileptics Anticonvulsants</li> <li>– Antibiotics/Antimicrobial</li> <li>– Anti-Helminthic</li> <li>– Anti-Fungal</li> <li>– Anti-Tuberculosis Drugs</li> <li>– Anti-Diabetics</li> <li>– Anti-Malarial</li> <li>– GIT Medicines</li> </ul> | <ul style="list-style-type: none"> <li>– Cardiovascular Medicines</li> <li>– Medicines Affecting Coagulation</li> <li>– Oxytocic Medicines</li> <li>– Ophthalmic Medicines</li> <li>– ENT Medicines</li> <li>– I/V Infusions (Plasma Substitutes)</li> <li>– Vitamins, Minerals and Food supplements</li> <li>– Medicines for Mental and Behavioural Disorders &amp; Tranquilizers</li> <li>– Anxiolytics</li> <li>– Contraceptives</li> <li>– Vaccines and Sera</li> </ul> |
|---|---|

The detailed list of medicines and supplies (essential and alternate + additional medicines) recommended at the PHC centre & FLH are provided in the Annexure A and B.

## Essential Equipment and Furniture

A standard list of equipment for community level and PHC facilities have been developed to compliment the EPHS package of the interventions to achieve the goals of the UHC.

At the community level, following equipment are required.

### Essential Equipment at Community Level

- |   |   |
|---|---|
| – LHW Kit Bag                                 | – Weighing machine (salter)                                 |
| – Stethoscope                                 | – Weighing machine (Adult)                                  |
| – BP Apparatus (Dial)                         | – Mid upper arm circumference (MUAC) tape (child and adult) |
| – Thermometer Clinical/ Infra-red thermometer | – Plain Scissors  |
| – Torch with batteries                        | – Respiratory counter                                       |
| – Urine sugar sticks                          |   |

In order to effectively implement the prioritized EPHS interventions at different types of PHC centre level facilities, a group of essential equipment and furniture is recommended, which is as following

### Group of Essential Equipment and Furniture at PHC centre and FLH

- |   |                                     |
|---|-------------------------------------|
| – Equipment for Emergency and General services      | – Operation theatre                 |
| – Equipment for Growth monitoring and Delivery room | – Dental unit                       |
| – Dilatation & Curettage (D&C) set                  | – Lab equipment and reagents        |
| – Caesarean section set                             | – Linen                             |

| – Procedure room                                    | – Miscellaneous including furniture |

A detailed list of essential equipment and miscellaneous items including furniture by different types of PHC centre and FLH is provided in Annexure C and D.

## HEALTH SYSTEM AND MANAGEMENT

A key element in ensuring successful implementation of the EPHS is to strengthen the supporting functions of the health system. There are different health system and health management components which are critical to ensure effective delivery of essential health services. These systems are usually managed at district level or above to ensure efficiency and uniformity. Options for different health system components and their costing/ effectiveness will be discussed separately.

In this section, some of the key health management arrangement at the community and PHC centre level are as following:

### Supervision

Supervision is the act or function of overseeing something (health facility/ services) or service providers. Generally, supervision contains elements of providing knowledge, helping to organize tasks, enhance motivation, and monitoring activity and results; the amount of each element is varying in different contexts.

- At community level, there is a dedicated supervisor (Lady Health Supervisor) to supervise the activities of LHWs in the catchment area. She is supposed to visit each LHW at least once in a month and do structured supervision using checklist. In addition, concerned health facility in-charge or LHV trainer should carry out supervision activities. The services which are offered by community-based organizations, have its own supervisory mechanism considering the design of intervention.
- At PHC centre (BHU), at least one visit should be ensured on monthly basis by the district level supervisor and more frequently by the tehsil level supervisor.
- At PHC centre (24/7 BHU), at least two visits should be ensured on monthly basis by the district level supervisor and more frequently by the tehsil level supervisor.
- At PHC centre (RHC), at least three visits should be ensured on monthly basis by the district level supervisor and more frequently by the tehsil level supervisor.

The following should be ensured during supervision activities at all levels:

- a. Use of checklist for quality supervision. Option for smartphone application-based checklist may also be considered for immediate reporting to district health management team and action by the concerned
- b. Written comments with signature should be ensured on registers for follow up actions
- c. Verbal/ written feedback should be provided to supervise with few actionable points, and discussion of supervisee performance
- d. Supervisee should be supported in decision making using the available data

### **Management Meetings**

Community based workers should attend monthly meeting at the health facility to submit report, collect medicines and supplies, hold discussion with trainers on service delivery related issues and continuing education.

At PHC centre and FLH level, short and structured weekly management meetings should be held to discuss issues and agree on few actionable points. Agenda items of these meeting should be but not limited to: Health information data quality and timeliness reporting, maintenance of record, utilization of services and their quality, disease data and preventive measures, community engagement, work conditions, finance & budget, decision-making and follow up actions.

### **Community Engagement and Feedback System**

At community level, each LHW is expected to organize Health committee and Women group and call meeting on monthly basis to discuss health related issues. PW councillor can also ensure community level health awareness and education sessions in collaboration with LHWs, while supporting the health facility staff in organizing health education sessions of patients/ clients visiting health facilities. CBO workers are also involved in health education and awareness raising activities among high-risk groups.

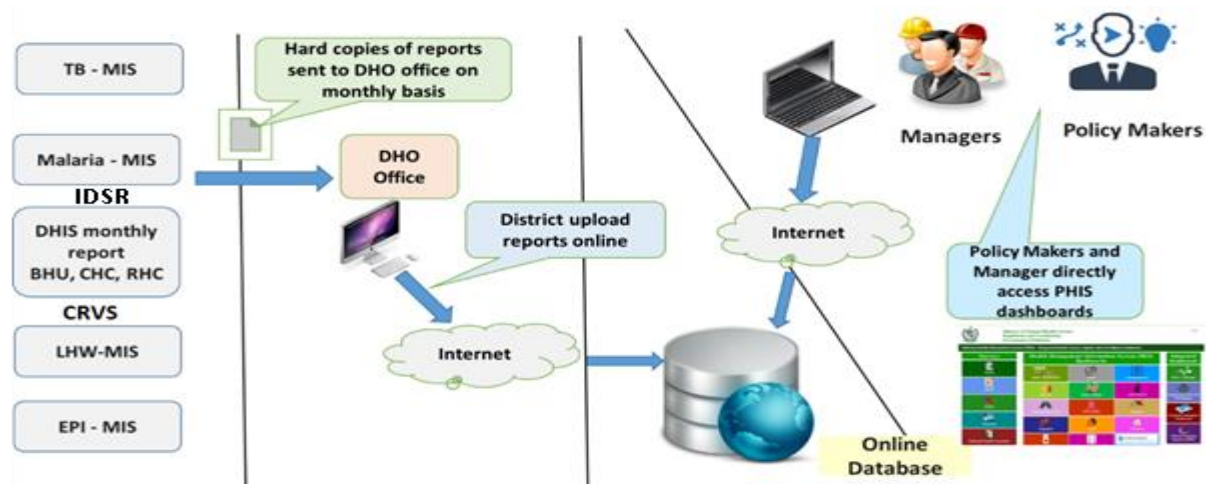

For getting Patient/ Client opinion and feedback on the LHW service provision, LHS can use her checklist or informal discussion to ensure feedback from some community members. At the PHC centre level, different options for opinion/ feedback from patients/ clients could be by fixing a complaint box in the facility, regular official meeting with community members, informal discussion with community members, using website of the ministry/ departments of health, toll free number etc.

### **Health Management Information System**

Monitoring reflects the periodic collection and review of information on services implementation, coverage and use for comparison with implementation plans. Monitoring identifies shortcomings well in time and thus of critical importance for providing quality care. Timely and reliable data is needed which is helpful for decision-making and strengthening of health systems. Monitoring data could be used to better adapt strategies to local conditions, with the aim of increasing effectiveness.

It is important that the supervision activities should have focus on the data recording and reporting and triangulate/ cross-check the monitoring data relayed through information system and the actual service provision. If the monitoring data relayed through the information system is of reasonable quality, then it should be used for planning the supervisory visits, focussing on the weaker service delivery points. Monitoring and routine supervision complement each other and are central to bringing transparency and accountability within the health system.

At the present, the information flow from the service providers in PHC centre is not digitised. There are multiple health information systems including LHW-MIS, EPI-MIS, Malaria-MIS, TB-MIS and PHC centre level District Health Information System (DHIS). The reports for all these health information systems are sent in hard copy to the district office on monthly basis where they are entered into the system and the data becomes available at central repository for the respective information system. All these individual systems have been linked to a common platform “Pakistan Health Information System” where the managers and the policy makers can have ready access to these systems. A schematic description of current information flows has been depicted in the picture below.

Government is considering the option of a (paperless) digital health information system at all levels. In the meantime, following MIS tools are required at community and PHC centre level.

### Essential MIS Tools at Community and PHC Centre Level

#### For Lady Health Worker

- Map of catchment area
- Family/ *Khandan* register
- Dairy
- register Curative register/Illaj Muallija
- Mother/ New-born checklist
- Delivery Referral slip
- FP Referral Slip
- MCH card
- Health Education material
- Flip chart
- Monthly report
- Catchment population chart
- Neonatal Death Review Form (Verbal Autopsy form)
- Maternal Death Review Form (Verbal Autopsy form)

#### For PHC Centre

- Map of catchment area and Demographic details
- Central registration point register
- OPD ticket
- Medicine requisition slip
- Outpatient department register
- OPD abstract form
- Laboratory register
- Referral slip
- Radiology/Ultrasonography/CT Scan /ECG register

#### For PHC Centre

- Indoor Patient Register
- Indoor Abstract Form
- Daily Bed Statement register
- Operation Theatre (OT) register
- Family Planning register
- Family Planning card
- Maternal Health register
- TB register
- TB treatment card
- Antenatal card
- Obstetric register
- Health education material
- Monthly report
- Daily medicine expense register
- Stock register (Medicine/Supplies)
- Stock register (Equipment/Furniture/Linen)
- Community meeting register
- Facility staff meeting register
- Secondary facility report form
- Catchment area population chart
- Procedures manual for DHIS
- LQAS form

## District Monitoring & Evaluation System

Main outcome level indicator at district level is 'Universal Health Coverage Index' which is a cumulative indicator of 4 priority areas and 16 priority indicators. This information should preferably be gathered using national and provincial health & social sector surveys. In case, information is not available than district level survey may be considered to collect information.

For services access and readiness assessment (SARA) of health facility/ district for delivery of EPHS, SARA tool has been adopted for Pakistan with support of WHO and University of Manitoba. The same has been aligned with the EPHS prioritized interventions. It is recommended to repeat the survey at district level with 3-5 years intervals. In addition, it is important to conduct qualitative research to assess community needs, health seeking behaviours and perceptions about quality of health services. Formative research to understand and monitor behaviours and prioritize communication messages is also important, along with other research agenda.

## Infection Prevention

The infection prevention at community and PHC centre is proposed for

### Separate Washrooms for patients/ clients

- Functional washrooms adjacent to waiting areas must be ensured with availability of water, soap / sanitizers, tissue papers etc.
- Cleanliness must be ensured at all times with waste disposable bins

### Individual/ Staff

- Ensure cleanliness
- Maintain hand hygiene, for preventing cross-contamination (person to person or contaminated object to person) – availability of sanitizers
- Have personal protective equipment available (caps, masks, aprons, eyewear, gloves, closed-toe shoes) and use it appropriately
- Prevent needle/sharp injuries

### Facility

- Adequate supply of clean drinking water
- Use containers for sharps disposal and dispose these safely
- Ensure that clean supplies are available at all sites (gauze, cotton wool, instruments, plastic containers etc)
- Ensure that antiseptics and disinfectants are available and are used appropriately
- Develop and maintain shelf-life system to store High-Level Disinfectants (HLD) and sterile items
- Ensure proper collection and cleaning of soiled linen
- Follow waste handling, collection and disposal guidelines properly

### Processing/ Sterilization of equipment

- Perform point-of-use decontamination of instruments and other items.
- Have a separate area for instrument cleaning, where instruments and items are properly cleaned.
- Ensure proper instrument processing, with facilities for HLD and sterilization.
- The proposed equipment for decontamination of instruments at the 24/7 BHU Plus and RHC include electric autoclave, non-electric autoclave, electric dry heat sterilizer, electric boiler/steamer, non-electric boiler/steamer and chemical HLD. At the 8/6 BHU, electric autoclave and chemical HLD is proposed.

## Waste Management

PHC centre level facilities should have the waste management guidelines available in order to reduce the amount of waste, and avoid mixing of general waste (paper, empty juice box, toffee wrappers, packaging) with infectious waste (e.g., dressings, needles) in different assigned colours bin and have regular capacity building of the staff and sweepers to improve practices related to waste management.

Waste management inside the facility should focus on

### Waste collection

- Use appropriate Personal Protective Equipment (utility gloves, eye protection and toe covered, long plastic shoes)
- Remove gloves immediately after disposing waste, and perform hand hygiene by washing hands with plain soap and water
- Collect waste in leak proof containers
- Leak proof containers once when three quarters full should be emptied. Do not wait for them to get full
- Human waste, such as the placenta, must be placed in double bags in the leak proof container
- Keep waste collection area clean and free of spills

### Waste disposal

- General waste should be discarded in the nearby waste disposal area
- Contaminated Liquid waste (blood, urine, faeces and other body fluids) should be emptied in a toilet/sink to get them drained into a sewer system
- Solid waste (used dressings and other materials contaminated with blood and organic matter) should be buried in the rubbish pit or incinerated
- Sharps containers should be buried in rubbish pit or incinerated or open burning with protection
- Sharps may also be stored in a protected manner for offsite removal / burning in district incinerator
- Incinerator in DHQ hospital is recommended

## Referral Services

Referral system is an essential element of an efficient health care delivery system where the patient load is distributed according to services need. For effective referral within the primary health care following propositions are made to make the referral system more effective.

There are different options for establishing a functional referral system including provision of ambulance to each health facility, pooling of ambulances at specific hubs and linking with on line services, using the services of philanthropist ambulance services or 1122 initiatives. Details of these interventions will be further explored in the district health system report. At this stage, following should be considered:

- The community level health workers and all PHC centre level facilities should be linked to each other and referral hospitals digitally with a bed registry and ambulance service system.
- Functional ambulances should be available in all PHC centre level facilities and position of drivers and paramedics should be filled.
- The referral forms should be available and the record of the referred patients adequately maintained.

- Referral protocols should be displayed in the health facilities
- The list of the referral facilities with contact numbers should be displayed/provided to community health worker so that in instances of emergency, a timely referral could be made and the referred facility is informed well in time to be able to provide requisite services.

## Capacity Development

All community and PHC centre level, staff must receive training/s for at least 15 days every year. An assessment is being done to identify training needs aligned with UHC Benefit Package of Pakistan. However, following key trainings (others to be developed) are recommended for the technical staff at community and PHC centre level at this stage.

<b>Training for Community Level Workers</b>
Training of Trainers (LHWs)
LHW Training and Inservice Training
Lady Health Supervisor Training
15 Days Refresher Training (Annual)
Specialised/ Refresher Training e.g., <i>Maan ki Sehat</i> and <i>Bachay ki Sehat</i>
Training for Vaccinators
Training of PW/ HPN Councillor
Training on Infection Control and Disease Surveillance (for surveillance staff)
Training of CBO staff on HIV prevention

<b>Training for PHC Centre Level Technical Staff</b>
Family Planning (FP)
Integrated Management of Pregnancy and Childbirth (IMPAC)
Emergency Obstetric and New-born Care (EmONC)
Emergency New-born Care and Helping Baby Breathe
Integrated Management of Neonatal and Childhood Illnesses (IMNCI)
Syndromic Management of Sexually Transmitted Infections including HIV
Malaria, Dengue and Vector Control
TB-DOTS
Non-Communicable Diseases (e.g., Diabetes, Cardio-Vascular Diseases, Respiratory Diseases)
Mental Health Global Action Plan (mHGAP) training
Infection Control and Waste Management
Mid-level management of EPI
Management of malnutrition + Infant & Young Child Feeding
Surgical procedures at PHC level
District Health Information System (DHIS) and Use of Information
Logistic and Supply management
Financial management

# Annexures

## A: Essential Medicines and Supplies - at PHC centre level facilities

Sr. No.	Medicine/Supplies	Availability (Yes/No)		
		8/6 BHU (Rural) Dispensary (Urban) GP Clinic (Pvt)	24/7 BHU (Rural) Medical Centre (Urban) Medical centre (Pvt)	24/7 RHC (Rural) Health Centre (Urban) Nursing Home (Pvt)
